17 Million Excess Deaths Associated with COVID-19 Vaccines

By Joel Smalley, metatron.substack.com

A study conducted by researchers (Rancourt, Hickey, and Linard)¹ from the Canadian nonprofit Correlation Research in the Public Interest, and the University of Quebec at Trois-Rivières, led by Denis Rancourt, released on July 19, 2024, analyzed excess mortality in 125 countries during the COVID-19 pandemic.

Key findings and claims:

1. The study's methodology involved analyzing excess all-cause mortality data and its correlation with various pandemic-related interventions.
2. The study argues that the major causes of excess deaths globally were due to the public health response, not the virus itself.
3. Researchers estimate approximately 30.9 million excess deaths from all causes during the study period.
4. The study challenges the conventional explanation that SARS-CoV-2 caused most deaths.
5. The authors argue that factors like lockdowns, harmful medical interventions, and COVID-19 vaccines contributed significantly to excess mortality.
6. The study claims to have found no evidence that vaccination campaigns reduced all-cause mortality.
7. On the contrary, the researchers estimate that 17 million excess deaths were associated with COVID-19 vaccines.
8. The researchers cite factors such as biological stress from lockdowns, medical interventions, and vaccine rollouts as primary causes of excess deaths.

Paper Summary

We studied all-cause mortality in 125 countries with available all-cause mortality data by time (week or month), starting several years prior to the declared pandemic, and for up to two and more than three years of the COVID period (2020-2023).

The studied countries are on six continents and com-

present study) had an April-July 2021 peak in excess all-cause mortality of 3.7 million deaths for its 2021 population of approximately 1.41 billion, which corresponds to an excess death rate of 0.26% for 2021 alone.²

Our calculated excess mortality rate ($0.392 \pm 0.002\%$) corresponds to 30.9 ± 0.2 million excess deaths projected to have occurred globally for the three-year period 2020-2022, from all causes of excess mortality during this period.

We also calculate the population-wide risk of death per injection (vDFR) by dose number (first dose, second dose, and boosters), by time period, and by age in a subset of European countries. Using the median value of all-ages vDFR for 2021-2022 for the 78 countries with sufficient data gives an estimated projected global all-ages excess mortality associated with the COVID-19 vaccine rollouts up to 30 December 2022: 16.9 million COVID-19-vaccine-associated deaths.

Large differences in excess all-cause mortality rate (by population) and in age-and-health-status-adjusted (P-score) mortality are incompatible with a viral pandemic spread hypothesis, and are strongly associated with the combination (product) of share of population that is elderly (60+ years)

and share of population living in poverty. There are large North-South (Canada-USA-Mexico) differences in North America, and large East-West differences in Europe, which are due to large national jurisdictional differences, or discontinuities in socio-economic and institutional conditions.

See 'Systematic Differences in Mortality' p.6

prise approximately 35% of the global population (2.70 billion of 7.76 billion, in 2019). The overall excess all-cause mortality rate in the 93 countries with sufficient data in the three-year period 2020-2022 is $0.392 \pm 0.002\%$ of 2021 population, which is comparable to the historic rate of approximately 0.97% of population over the course of the 1918 "Spanish Flu" pandemic.

By comparison, India (which is not included in the

Excess Deaths From Disease Increases 50% Among Young People

By Peter Imanuelson

Something very worrying is happening, and I have warned about it before. But nobody in the mainstream media seems to have taken it seriously, until now.

For some reason, we have been seeing massive numbers of excess deaths, and scientists are apparently clueless as to what could be the reason.

A shocking new statistic from Norway shows that in 2023, there were over 50% excess deaths among young people aged 1 to 39 years old. The figures are very worrying to researchers who are sounding the alarm about:

- 32% increase in cardiovascular deaths
- 51% excess deaths from disease
- 36% excess deaths from all causes

The dominating factor among deaths from diseases were things like "other symptoms and undefined conditions." In other words, things that they don't have an

answer for. Which is weird.

Mainstream media is reporting that some researchers think Covid is one of the main reasons for the excess deaths. Another expert they talked to wants to point out that people definitely shouldn't think that the Covid injections are the problem here.

However, the Norwegian Institute of Public Health says that they don't think Covid is the reason for these excess deaths. Rather, they give other explanations, such as the massive changes in society during the pandemic years (probably referring to things such as social distancing and the like). But, we have seen excess deaths elsewhere in Europe, too.

In 2021, Portugal had the highest Covid vaccination rate in the entire world. Earlier this year, they had the highest number of excess deaths in Europe. Back in week 49 of 2022, there were a whopping 43.3% more deaths among children aged 0-14 in Europe, compared with that number during the pandemic from 2020 to mid-2021.

In 2022, there were over 408,000 excess deaths in

Europe and barely anything about it on the news. This was after everybody got the "safe and effective" mRNA injections. So in theory, there shouldn't have been any excess deaths if the injections actually worked! I reported on that already.¹

We now know that the Covid injections were neither safe nor effective. A recent study showed that the Covid injections are likely linked to brain damage.² We already know that they cause menstrual disorders and myocarditis.

People were not informed of these side effects when being coerced into taking the injections. And now, Moderna has just landed a huge contract to make new Bird Flu mRNA injections.

Why is nobody talking about the excess deaths?

International Bird Flu Summit

Let the Fear-Mongering Begin

By Leo Hohmann

Another plandemic appears to be in the offing, judging by the obsession that so many elites seem to have with the H5N1 strain of bird flu.

We've all heard about the slaughter of millions of poultry. Even some cattle.

And now they've called an **"International Bird Flu Summit"** to be held in Washington D.C. from October 2 to October 4, 2024, and according to the official online brochure for the event, they will be discussing "a highly virulent strain of bird flu affecting both cattle and humans."

This Summit appears to be a tabletop exercise to war-game a coming bird flu "pandemic," serving much the same purpose as the Event 201 exercise served in October 2019 in New York City for a [hypothetical novel coronavirus] pandemic, like Covid-19.

The bird flu, of course, promises to be much worse, with a death rate of between 25 and 50 percent, or at least, that's what we're told.

The scare-mongering is ratcheting up quickly, just as we approach the November presidential election. Whether this next pandemic will be timed for November or sometime in 2025, it's not a good sign that the elites have scheduled this tabletop exercise.

The Bird Flu Summit appears to be looking for corporate sponsors, and on the list of topics for this Summit, according to the conference website, the very first one is

"Mass Fatality Management Planning"

Another breakout topic will be **"Surveillance and Data Management,"** with this description: *"Discuss strategies for enhancing surveillance systems, early warning mechanisms, and rapid response protocols."*

Sounds like another justification for digital health passports, which is a form of digital identification for tracking human movement (and barring entry to certain

venues, unless you can prove you've been vaxxed).

Finland has recently **become the first country to start vaccinating** its population with an mRNA bird flu serum.

Finland has bought bird flu vaccines for 10,000 people, each consisting of two injections, as part of a joint European Union procurement of up to 40 million doses for 15 nations from manufacturer CSL Seqirus.

Meanwhile, *Wired* magazine reports, the **US Government has awarded Moderna a \$176 million contract to produce an mRNA Bird Flu Vaccine.**

Here's the full list of topics according to the Bird Flu Summit website:

- Mass Fatality Management Planning
- Surveillance and Data Management
- Preparing Communities Strategies
- Local Partnership & Participation
- Delivery of Vaccine and Antiviral Medication
- Medical Countermeasures
- Socio-Economic Impact on Poultry and livestock Industries
- Benefit-Risk Assessment: Public Health, Industry and Regulatory Perspectives
- Prevention Education Efforts and Risk Communication
- Command, Control and Management
- Emergency Response Management
- Business-Based Planning
- School-Based Planning
- Community-Based Planning

Under the heading, "Who Should Attend," the Summit website lists:

- Public Health Officials
- Veterinarians and animal health professionals
- Epidemiologists and infectious disease specialists
- Policy Makers and Government Representatives
- Pharmaceutical Industry
- Professionals Academics, Researchers and Scientists
- Industry Stakeholders in Poultry Production, Livestock, Diagnostics, Food Safety, and Healthcare
- Non-Governmental Organizations (NGOs)
- International Organizations & Agencies

Is it just me, or does it appear the globalists are gearing up for another big event?

- During the Canadian Federal Ethics Committee on June 18, 2024, **Conservative MP Larry Brock called for the RCMP to finally arrest Prime Minister Justin Trudeau for obstruction of justice.** Previously, Attorney General Jody Wilson-Raybould presented extensive evidence while testifying before the Justice Committee of the House of Commons. She testified that Trudeau committed the crime of obstruction of justice by interfering with the criminal prosecution of his friends at the Quebec-based construction company, SNC-Lavalin.
- In a landmark ruling issued on July 17, 2024, **the General Court of the European Union has ordered the European Commission to fully disclose the COVID-19 vaccine contracts it signed with several pharmaceutical companies.** After the court found that the Commission had improperly applied exceptions to protect commercial interests, several members of the European Parliament initiated a legal battle seeking greater transparency.
- **The Crown has withdrawn all criminal charges against William Dalton, charged with obstructing a peace officer and causing a disturbance during the peaceful 1 Million March 4 Children rally in Ottawa last year.** Dalton, who joined the March to draw attention to the introduction of sexual orientation and gender identity in the public school curriculum, was subjected to multiple tasings despite offering no resistance to his arrest.
- **John Deere joins Bud Light, Target, and Tractor Supply in announcing the abandonment of all its forays into left-wing causes, diversity quotas, and gender identity projects.**
- **Ontario parents will be notified in advance about guest speakers and their planned activities in schools**

FREEDOM WINS!

starting in the 2024-25 school year, according to a new directive from the Ontario Education Ministry. A parental rights advocacy group, Parents as First Educators, is praised for the directive that enables parents to make informed decisions about whether to permit their child to hear third-party speakers whom they may deem inappropriate.

- During this year's 54th General Assembly for the Organization of American States, **foreign ministers and ambassadors from Argentina, Paraguay, Peru, and some from El Salvador, the Dominican Republic, and Grenada took a clear stance against Agenda 2030,** calling for the removal of euphemisms such as "sexual and reproductive rights" and "hate speech."
- **Saskatchewan wins an injunction to block the CRA from collecting carbon tax** pending the full hearing. The showdown between the province and the federal government has been brewing since late 2023, when Trudeau announced home heating oil (used in Atlantic Canada) would be exempt from the price on carbon, but electric heating and natural gas (used in Saskatchewan) would not. Premier Scott Moe called the decision "politically motivated" and announced he would not collect the tax.
- **Mick Jagger of the Rolling Stones was met with a loud chorus of "boos" in Vancouver in July when he mentioned Justin Trudeau.**
- **The Texas Supreme Court upheld a 2023 law making it illegal to subject minors to puberty blockers, transgender hormone interventions, and "gender transition" surgeries.** In its 8-to-1 ruling, the court found that "the risk of providing [transgender interventions] to children solely for the purpose of physically transitioning from their sex at birth was not outweighed by the benefits."
- **South Carolina Republican Governor Henry McMaster signed into law a ban on surgically or chemically mutilating confused minors for the sake of "transitioning" them away from their true gender.** The *Help Not Harm* bill, prohibits medical professionals from subjecting anyone under 18 years old to puberty-blocking drugs, cross-sex hormones, or "genital or non-genital gender reassignment surgery."
- **A House of Commons Petition to stop harming**

gender-confused children has just been launched.

The online petition (e-5010) is requesting a cease of all physical medical procedures for individuals under the age of 18 and gender-affirming care for those under 16 and to "disengage from any association or endorsement of WPATH (World Professional Association for Transgender Health) and its recommendations, as they have been largely discredited and are not conducive to safeguarding the well-being of children and adolescents."

- The Federal Conservatives have **tabled a Bill to prevent the Bank of Canada from replacing hard cash with digital currency.** They state: "In a world where governments, banks, and corporations are increasingly infringing on the privacy rights of Canadians, cash remains the only truly anonymous form of payment." This Bill calls for a national framework to ensure continued access to and use of cash in Canada.
- **An appeals court has ruled in favour of the Association of American Physicians and Surgeons, finding that the federal government's now-defunct Disinformation Governance Board coordinated with several medical boards to stifle doctors' free speech** on social media platforms during the COVID-19 pandemic.
- **The first criminal case against Pfizer is underway.** Argentinian lawyer, Augusto Roux, experienced "gas-lighting" when hospitalized for heart inflammation during his participation in a Pfizer COVID vaccine clinical trial. He is leading this groundbreaking case, alleging that the Pharma giant covered up severe vaccine injuries during COVID-19 trials.
- **An Ontario court has ruled in favor of a woman who was charged and convicted for refusing to submit to a COVID nasal swab test upon returning home to Canada in 2022.** Ontario Court Justice Paul Monahan decided in favor of Meththa Fernando and concluded that in Fernando's case, requiring her to submit to such an invasive test was unlawful and ordered her conviction be overturned.
- **A large group of medical doctors, scientists, and academics have initiated and signed a statement calling for the immediate suspension of the mRNA COVID shots.** The statement, entitled *The Hope Accord*, has gained more than 45,000 supporters, including 1,415 medical doctors, 3,887 other healthcare professionals, 1,533 scientists and academics, and 38,977 concerned citizens (as of July 28, 2024).

Statins and Accelerated Aging

By Remnant MD

When I started reading and thinking critically about all the fraud I was sold as “fact” during my training, I did not foresee spending so much of my time harping on **statins**.

Part of the reason why it has turned out this way is because statins are **so widely prescribed**. What began as a drug to be used for people who have had a heart attack in the past to prevent another heart attack (called secondary prevention), quickly became a drug to be used to prevent a first-time heart attack (primary prevention).

Today, the indication for statin prescription continues to expand. People regularly reach out to me because their doctors have prescribed them a statin for reasons including:

- LDL cholesterol is “high”
- They are “pre-diabetic,” that is to say their Hemoglobin A1C is not high enough to be diagnostic of diabetes, but they still want to label you
- They suffered a stroke because of a hole in their heart (called a patent foramen ovale) that allowed a clot to circumvent the lung circulation (where it would be dissolved) and go straight to the brain

The reasoning doctors use to sell this drug has just become increasingly more absurd. Absurd strictly on the basis of clinical trial data that supports its use. We aren’t even talking about the physiologic consequences of putting statins in your body, and the widespread side effects including:

- Mitochondrial disruption
- Muscle pain/death
- Diabetes (yes, **the drug being used in “pre-diabetics” actually causes diabetes**)
- Dementia
- Even heart attacks¹

That’s all to say that, as time goes on, more and more people whom I care about are being given this poison by their doctors. It’s very hard to unravel all of the nonsense that surrounds the justification of its use and the gaslighting involved in obfuscating all the damage it’s causing.

That is why I write these articles. Trying to communicate with those I care about.

This article will not address many of the questions and rebuttals I typically get when talking about statins and cholesterol. If you are truly interested in the nitty gritty, this article has quickly become one of the most well-received.²

Aging and Senescence

Longevity and quality of life seem to be all the rage today. So, let’s talk about it. When we speak about “aging”

we do not merely mean time passing. We can think of that as chronological age. What we are really interested in is **senescence** (senility). This is a cellular/physiologic term as much as it is how you’d describe a grumpy old person.

As we age, our cells degrade in their ability to heal, grow, and otherwise dedicate resources for physiologic function and thriving—what we can broadly refer to as metabolism. In our current understanding of physiology, there are a couple of **hallmarks of aging** we often refer to that include:

- Decreased capacity for our tissue to heal and grow
- Decreased metabolic efficiency and function
 - A little-known effect is the degree to which our mitochondria (metabolic powerhouse) produce new water

- Directly related to many of the hallmarks of aging, including reduced fullness or “plump” of our tissues
- Increasing stiffness and rigidity (or decreased flexibility) seen on the macro scale (with joints) and on the micro-scale (arteriosclerosis—stiffening of arteries)

One of the ways that our cells and tissues maintain fluidity and adaptiveness is through cholesterol (lipids). Lipids insert themselves in the structure of our cells and improve the movement of energy flow throughout the body, like a good conductor. Without cholesterol, our arteries become more rigid and less adaptable. Without endogenous water production, our tissues get dry.

This combination of factors is why I believe statins cause stiffening and calcification of arteries. Statins block much more than just cholesterol production. In fact, statins block the production of thousands of important proteins, hormones, and regulators in the body.

On the one hand, statins are blocking the production of cholesterol, which leads to the loss of the factor

that promotes fluidity, adaptability, and healing. On the other, statins directly disrupt the mitochondrial pathway that produces energy (ATP – Adenosine Triphosphate) and water. The result is rigid and inflexible arteries. The consequences of this can be seen in the elderly population. Their vascular system is so inflexible that otherwise normal changes in cardiac output can result in wide fluctuations in blood pressure. This manifests as getting “light-headed” or hypotensive on one end, and dangerously hypertensive to the point of hemorrhage on the other.

We haven’t even started talking about other organ systems and tissues, because remember that, while statins impact your arteries, they also impact every cell in the body, and more so, every cell that has mitochondria.

But, wait—there’s more!

Mitochondria don’t only exist inside your cells. They are also free-floating in your bloodstream.³

Putting It All Together

Simply by virtue of the physiologic pathways that statins disrupt, they have consequences that are far broader than “reducing cholesterol” or “muscle cramps.” Even if you accept the assertion that artificially reducing cholesterol is good, you still have to contend with all of the other side effects. **Muscle cramps are the most-frequently reported side effect, only because it is the side-effect you can feel.**

You can’t feel your mitochondria becoming so inefficient that you start to develop insulin resistance or diabetes. You can’t feel your tissues losing the ability to produce adequate water. After all, you are just “getting older” and this has nothing to do with statins. You can’t feel the onset of dementia until it is too late. You can’t feel the low-grade ischemic insults to your heart, muscles, and other tissues as a result of the disconnect between energy needs and the mitochondria’s capacity to keep up.

What you need to understand is that “muscle cramps” are not just “cramps.” When you think about it deeply, you will realize what this reveals about the nature of statins and the consequences to the rest of the human body.

There will come a time when we look at the widespread use of statins like we look at the widespread use of opioids today.

This will mark yet another dark chapter in the history of allopathic medicine. You can hold me to it.

Why is Canada Burning?

By Zak Nicholls

Oxford Dictionaries define geoengineering as a noun, 1. the deliberate large-scale manipulation of an environmental process that affects the earth’s climate, in an attempt to **COUNTERACT** the effects of **GLOBAL WARMING**.

Oxford almost got it right. Change **COUNTERACT** to **CREATE** and **GLOBAL WARMING** to **CLIMATE CHANGE** and they will have nailed it.

Forest fires are nearly the perfect geoengineering tool. They are likely the third most effective process to guarantee climate crisis, following nuclear cataclysm and exploding volcanoes. Currently, forest fires are the easiest and cheapest method of geoengineering.

There is a saying: **An evil man will burn down his own nation to the ground in order to rule over the ashes.** I believe that is the kind of crazy we are dealing with; however, nuclear winter might be taking it too far. Bill Gates and friends are working on revving up volcanic action, thinking that might be a safer and easier alternative to atomic Armageddon.

Persistent lasting contrails (chemtrails) leave an all too easily identifiable time stamp that gets people to talking and taking pictures. I suppose one question that I would want answered regarding forest fires, is what causes our earth to be so combustible? I read somewhere that aluminum is incendiary. Maybe that is why persistent lasting contrails are so important.

What is coal fly ash?

Officially, geoengineers suggest sulphur might be an effective aerosol to prevent the sun from doing its job. Has anyone seen the sulphur pyramids in the Alberta tar sands? They are the largest pyramids on earth. I wonder what that sulphur might be used for? Placing reflective particles in the atmosphere will cause a minuscule num-

ber of life-giving rays of sunshine to bounce back from whence they came; however, it can also create a greenhouse effect between the ash and where we dwell.

Does anyone remember acid rain? That was the threat

du jour of the eighties. Everything had to change in order to prevent the end of the world. People had to change their behaviour. Acid rain had to be stopped! It was so bad, it was going to eat right through and destroy important things like statues of historic people, denying BLM (Black Lives Matter) the future opportunity.

Was 911 possibly a giant experiment to test and justify the effects of geoengineering? Following the attacks that provided George Bush the side benefit and perfect opportunity to reclaim US oil buried under the sands of Iraq and prop up the welfare of the military industrial complex, the University of Wisconsin-Whitewater took the opportunity to grab temperature data from immediately before the attack, and the three days of grounded flights. They say the change in the temperature difference was +1.8 degrees Celsius.

What is the so-called no turning back global tipping point?

What can be done when a corporation and the governments that serve them want to exploit resources when there is a pesky boreal forest and so-called environmentalists in the way? There is an easy solution that provides easy access to elements needed for EVs and smart phones. Burn that forest down, but label it as climate change. Blame it on and demand concessions from the peasants. Never let a good crisis go to waste.

Why geoengineering? Power and money, or possibly money and power.

Scientists Create Organic Slave Computer

By James Corbett, corbettreport.com

Remember when you were a kid and you used to speculate about what wonders awaited us in the 21st century? Wow! 2024? I bet we'll all be driving flying cars by then! Or at least riding on our Back To The Future hoverboards. Yes, just imagine what amazing gadgets and technological wonders those scientists have in store for us!

And hunger? Disease? War? We'll have solved all those problems by then! I can't wait for our future utopia!

Well, here we are in 2024 and I have some news for you: there's nary a flying car in sight, and hunger, disease, and war are still depressingly pervasive.

But there is one area of research where the eggheads haven't let us down: the development of frightening new technologies of enslavement!

Case in point: A Swiss startup has just announced the first "bioprocessor" constructed from 16 "human brain organoids." Without even knowing what any of that means, you can already tell this is bad. But you don't know the half of it yet.

FinalSpark and the "Living Computer"

If you keep your eye on the establishment media propaganda, you may have noticed the recent coordinated rollout of the latest MSM scare story: the AI industry is using massive amounts of energy!

"Google's emissions climb nearly 50% in five years due to AI energy demand," screams *The Guardian*.

"Big Tech is turning to nuclear power because it needs more energy for AI," warns Quartz.

"AI's energy appetite might kill the power grid," screeches that bastion of tech journalism, *Fudzilla*.

If you're like me, you've been bracing for impact ever since these scaremongering stories started flooding the newsfeeds. After all, we know that hysteria campaigns are generally used to prepare the public for some horrible new "solution" that the technocrats have lying in wait for us.

Well, guess what? That "solution" is here, and it involves a computer made of living human brain tissue!

That's right! A Swiss tech startup called FinalSpark¹ just launched the first online platform providing researchers access to a "living computer" made from brain "organoids"—that is, artificially grown, in vitro human brain tissue.

Those who want the nitty gritty details of how this "Neuroplatform" has been constructed and how it operates can read FinalSpark's recent research paper on the subject. In it, you can learn all about how "Human Neural Stem Cells (NSC) derived from the human induced pluripotent stem (hiPS) cell line (ThermoFisher), were plated in flasks coated with CellStart (Fisher Scientific) and amplified in Stempro NSC SFM (Serum Free Medium) kit (ThermoFisher) complete medium."

Or, if you'd prefer to ditch the gibberish in favour of something approximating English, you can turn to the popular scientific press, which will tell you all about this nifty new technology.

The operation of the Neuroplatform currently relies on an architecture that can be classified as wetware: the mixing of hardware, software, and biology. The main innovation delivered by the Neuroplatform is through the use of four Multi-Electrode Arrays (MEAs) housing the living tissue—organoids—3D cell masses of brain tissue.

Each MEA holds four organoids interfaced by eight electrodes used for both stimulation and recording. Data goes to-and-fro via digital analog converters (Intan RHS 32 controller) with a 30kHz sampling frequency and a 16-bit resolution. These key architectural design features are supported by a microfluidic life support system for the MEAs, and monitoring cameras. Last but not least, a software stack allows researchers to input data variables, and then read and interpret processor output.

Now, if you have your head screwed on straight, the obvious question that will occur to you is: Why? Why on earth are these boffins so interested in creating computers out of living brain tissue?

Thankfully, the pop-sci "journalists" can answer that one for you, too!

FinalSpark says its Neuroplatform is capable of learning and processing information, and due to its low power consumption, it could reduce the environmental impacts

of computing. In a recent research paper about its developments, FinalSpark claims that training a single LLM (large language models) like GPT-3 (generative pre-trained transformer) required approximately 10GWh—about 6,000 times greater energy consumption than the average European citizen uses in a whole year. Such energy expenditure could be massively cut following the successful deployment of bioprocessors.

Yes, to the surprise of no one, all this hysteria about AI power consumption just so happens to perfectly coincide with the advent of a miraculous new technology that will

activity.

Yes, you read that correctly. Stripped of all the niceties and polite circumlocutions, these researchers are alternately doping and torturing this brain tissue to force it to process information for them. If we consider for a moment that these lab-grown human brain organoids are, in fact, living creatures, then this entire system should be sending shivers down your spine.

In his own article on the subject, independent researcher Michael Snyder eschews the "organoids" euphemism and calls these beings what they are—

"enslaved mini-brains." He then puts this "reward and punishment" training system in its proper perspective: If the enslaved mini-brains do what they are supposed to do, they are rewarded with lots of pleasure. If the enslaved mini-brains do not do what they are supposed to do, they are hit with lots of "irregular electrical activity." In other words, these miniature human brains are tortured until they learn to obey.

Reading that should literally make you sick. What these scientists are doing is so incredibly evil. Amazingly, neither the FinalSpark scientists themselves nor the PR men masquerading as pop-sci "journalists" have addressed these concerns or even shown any interest in the philosophical implications of growing living human tissue in a lab and forcing it to do their bidding.

If confronted, they would doubtless tell anyone with questions about this project to just relax! After all, these aren't fully developed brains harvested from fresh human cadavers or any-

thing like that. They're just forebrain organoids (FOs) hooked up to electrodes on a "multi-electrode array" (MEA).

Considering that these "forebrain organoids" are alive, does that mean they die? Why, yes! Yes, they do die! But don't worry, everyone, the FinalSpark team's diligent efforts have greatly increased the lifespan of these biocomputers!

Human brainlets die, too

As the researchers themselves brag, while the initial lifespan of these biocomputers "was only a few hours," they have—by implementing "various improvements" to the "microfluidics setup"—managed to extend this lifespan to "up to 100 days in best cases." Of course, FinalSpark fails to describe what exactly it does with these "organoids" after they die. But it does inform us that, during the four years the Neuroplatform has been running, the enslaved mini-brains have been replaced 250 times. And, given that they have four of these human brainlets hooked up in their "multi-electrode array" at a time, "this amounts to testing over 1,000 organoids."

If this isn't the strangest and creepiest story you've encountered lately, then I don't know what to say. But if you'll agree with me that this story is perverse, horrific, and deeply disturbing, then you'd better prepare yourself. If the technocrats have their way, this is only the beginning.

It's important to note that what FinalSpark is doing is not some fringe, ghoulish, scientific anomaly. It's not some strange outlier dreamed up by a band of mad scientists. In fact, it's not even a new idea.

As it turns out, there is an entire field of computing called "wetware computing" that concerns itself with finding ways to use organic material to process information. The first example of this "living computer" idea was constructed in 1999, when Professor Bill Ditto at the Georgia Institute of Technology created a "novel calculator"—dubbed the "leech-ulator"—that used leech neurons to perform simple calculations. Ditto insisted the idea was revolutionary because ordinary computers have to be told exactly what to do, whereas bioprocessors can work it out for themselves. Blessed with its natural, organic intelligence and problem-solving abilities, these "living" computers can even derive correct answers from partial or faulty data inputs.

"Ordinary computers need absolutely correct information every time to come to the right answer," Ditto says. "We hope a biological computer will come to the correct answer based on partial information, by filling in the gaps itself."

And that was 25 years ago. Since then, we have seen the advent of computers made from human brain cells that can perform voice recognition. And a cluster of human brain cells on a computer chip that have been trained to

solve that problem. "Quelle coinkydink!" as the French would say.

Of course, just the idea of using human brain tissue as "bioprocessors" to perform computation seems a bit icky. But wait! It gets far worse!

Slaves in a Jar

Okay, let's recap: over the past month, the mockingbird media mouthpieces have begun warning in unison about a looming energy apocalypse as the AI industry begins consuming massive amounts of power. Then, out of the blue, a plucky Swiss tech startup (with private funders) arrives with a solution: a "Neuroplatform" that can save massive amounts of energy by using living human brain tissue to process information!

So far, so weird. But here's where it gets creepy: When the FinalSpark brainiacs talk about using living human tissue to create this "bioprocessor," that isn't a figure of speech. The "brain organoids" used in this "living computer"—developed, as their research paper tells us, "from Human iPSC-derived Neural Stem Cells"—are, in fact, alive.

This pesky little fact raises some deep moral quandaries—the type of "brain in a jar" ethical dilemmas that are, naturally, completely overlooked by the FinalSpark bioengineers and the fawning corporate press covering the story.

If these brain computers are, in fact, composed of living human brain tissue, do they count as living beings with all the same rights and considerations we would extend to any other living creature?

They can perform calculations and process information—so, what if they're sentient? Can they be aware of their surroundings? Do they feel pain or suffering?

How are these living creatures made to do this computing, anyway? And what if these helpless slave computer-brains—created in the lab for the sole purpose of processing information for their masters—didn't want to do the scientists' bidding?

Well, at least that final question has already been asked and answered, according to one recent report on FinalSpark's Neuroplatform.

After accessing the provided login/password, researchers gain the ability to remotely send electrical signals to neurons and receive their responses. It is then the responsibility of researchers to devise optimal algorithms for controlling the behaviour of the organoids.

Users can mimic memory function by using periodic electrical stimulation to reinforce synapses through repetition, thus making desired pathways stronger.

Reward and Punishment

Researchers train the organoids through a reward system. The organoids are rewarded with dopamine, the neurotransmitter responsible for pleasure (and addiction). Meanwhile, as "punishment," the organoids are exposed to chaotic stimuli, such as irregular electrical

The Mainstream Worldview Is A Mass-Produced Artificial Psychosis

By Caitlin Johnstone

It's difficult to wrap your mind around the scale and pervasiveness of the mountain of lies upon which this dystopian civilization is built. You think you're starting to get a read on things, then you gain more knowledge and insight and realize it goes so much further than you thought. You start pulling on one thread, maybe some obvious lie about Iraq or Palestine or whatever, and the whole thing just keeps unraveling and unraveling and unraveling. Before you know it you're staring at a society that is not just riddled with untruth, but actually woven entirely from the fabric of untruth.

Everything.

How your nation really works. How the world really works. How capitalism really works. What politics really are. What the media are really used for. What laws are really used for. What wars and militarism are really used for. What ideology is really used for. What religion is really used for. What culture is really used for. What rules and etiquette are really used for. It's all made-up narrative all the way down, and all of those narratives are made up by the powerful in the service of the powerful.

You can tell someone's still playing in the shallow end of the pool of political insight based on how much time they spend freaking out about a dark dystopian future, because it shows the extent to which they fail to perceive how profoundly unfree we are right here and now. Right wingers, ideologically prohibited from considering the possibility that what they're experiencing under capitalism isn't real freedom, spend their time freaking out about a neo-Marxist future where everyone's trapped in 15-minute cities and forced to take poisonous vaccines and eat bugs. Western liberals, ideologically prohibited from considering the possibility

they live under the world's most tyrannical power structure and that everything they were taught is a lie, spend their time freaking out about a future under a horrible Trumpian dictatorship.

If you've really got your eyes open, you understand that, as a whole, we could not actually be more effectively enslaved to the will of the powerful than we are right now, even if we were all wearing chains around our necks

and had mind control computer chips in our brains. As a collective we're always thinking, speaking, labouring, spending, living, acting, and voting exactly as the wealthiest and most powerful people in our society want us to, our entire lives completely dedicated to the service of their continued power and profit while our information systems keep pummeling us with the message that we are free.

We are indoctrinated into believing we live in a free country, unlike those poor suckers in Iran or North Korea, and we are indoctrinated into believing every-

the mechanisms that underlie biology, we could see a shift away from vitalism—the idea that living and nonliving organisms are fundamentally different because they are thought to be governed by different principles. Instead, the idea of biology as having predictable and digitally manageable characteristics may become increasingly common as a result of living in a biodigital age. Any student of biology today will have grown up in a digital world and may consciously or subconsciously apply that frame of reference to bioinformatics and biology generally.

Transhumanist Agenda

Just as the Central Bank Digital Currency (CBDC) paradigm and the complete control of our digital life is predicated on the digital ID system, so, too, is the transhumanist dream of merging man with machine predicated upon a breakdown in our philosophical intuition of vitalism. In other words, in order to get us to accept the coming transhuman dystopia, the technocrats are going to have to break down our fundamental, deeply-held belief in the difference between living, organic matter and inanimate non-life. It is one of the linchpins of the entire Transhumanist Agenda.

That sense of vitalism is precisely why we find organic slave computers with living human skin and animatronic robots with realistic facial expressions so profoundly creepy. These technologies start to challenge our belief in the boundaries between life and non-life. Now, there is one hopeful thing in all of this: If you still do feel that sense of creepiness when you think about or read about or see this technology, then that is a good thing. That means you still have your head screwed on straight even in the face of so much propaganda designed to convince us to give in to the Trans(human) Agenda.

Embrace that feeling of creepiness. Do not lose your sense of disgust at this technology. You will need to cling on to that so that you can forcefully and powerfully reject this technology and everything and everyone associated with it. Those who are seeking to break down this distinction and desensitize us to this "living" computer idea are our ideological enemies. If we ever stop seeing them as the enemy in this struggle, that is when we lose our humanity altogether.

Having said that, this is not some theoretical warning about some far-off, hypothetical threat. It is here. Now.

thing else our tyrannical rulers want us to believe as well. We sing of our freedom while marching in unison to the beat of the imperial drum, our minds so fully subjugated that we don't even realize that we are marching.

"We are free!" we cry. "Free to sell our labour at extortionate rates to the capitalist class. Free to pay rent to professional land-hoarders or mortgage payments to banks for the privilege of having shelter on the planet we were born on. Free to choose between ten thousand different kinds of toothpaste and two warmongering capitalist political parties. Free to vote in fake elections for fake candidates who will never change anything. Free to think however we were trained to think and say anything we've been trained to say. Free to live exactly how we've been programmed to live by our owners."

And sure, there are a few of us who manage get our minds unplugged from the propaganda matrix, but our numbers are kept so few as to be inconsequential. Everyone else is told we are paranoid conspiracy theorists and victims of Russian propaganda and disinformation in order to inoculate the mainstream herd against infection from our wrongthink, while the volume on the imperial indoctrination machine is simply cranked up a notch.

The good news is that there's no way this is sustainable. There's only so much depravity you can sweep under

the carpet with the broom of deception before people start noticing the lumps on the floor. There's only so far you can stretch and twist the human mind before it snaps. The empire is a house of cards resting on a closed pair of eyelids, and at some point, those eyelids are going to flutter open. At some point, everyone's going to start noticing the loose threads in the fabric of all this, and keep pulling and pulling until they see through the entire scam.

Living Computers

Continued from p.4

play the "Pong" video game. Now that Neuroplatform is available for researchers to play around with, who knows what these geniuses will come up with next!

So, what would you get if you put one of these "living computers" into a cyborg exoskeleton covered in living human skin?

That may seem like the type of question that is confined to the purely hypothetical realm—fodder for some wacky sci-fi writer with an overactive imagination, perhaps—but it isn't. As we've already seen, "living computers" using human brain tissue to make calculations are already here. And guess what? Living skin for robots is already here, too.

Just last month, it was announced that "[a] team of scientists at the University of Tokyo has developed a robot face covered with self-healing, lab-grown skin that can mimic human expressions."

Now, just imagine if an organic slave computer brain was put into a robot covered in that self-healing, lab-grown, human-expression-mimicking skin. And now, imagine if that robot looked like the truly skin-crawling (pun intended) Disney animatronic robot. Yes, the Disney robot is really a thing, and it's even more disturbing when you see it in motion.²

So, let's answer that question. What would you get if you put an organic slave computer inside such a skin-covered, animatronic robot?

The answer is tricky. You certainly wouldn't have a human. But you wouldn't exactly have a robot, either. And that is exactly the point.

You might recall my coverage of the "biodigital convergence" from three years ago. If not, please go back and re-read that article or re-watch that podcast to refamiliarize yourself with the crazy Canadian government think tank report³ on how "biological and digital systems are converging" and how this convergence "may transform the way we understand ourselves and cause us to redefine what we consider human or natural."

I made special note of this passage from that document: "As we continue to better understand and control

The Censorship Cartel

By Ben Shapiro, Daily Wire

Transcribed from Shapiro's statement to the US House Judiciary Committee, July 10, 2024.

"We're in the midst of a trust crisis in the world of media, which is because so many in the legacy media have lied in order to preserve left-leaning narratives. To take just the most recent example, we were told by the legacy media that President Biden was just fine. For years, anyone who questioned his health and mental fitness was trafficking in cheap fakes. And then President Biden went out and engaged in a full-scale mental collapse on stage in front of hundreds of millions of people.

"So we can see why Americans, at least Americans who are not Democrats, do not trust the media. The question isn't really why the legacy media have lost Americans' trust. We know that answer. The question is why, despite that loss of trust, the legacy media continue to gain share in the advertising market. And the answer is simple. There is, in fact, an informal pressure system created by Democratic legislators, this White House, legacy media, advertisers, and pseudo-objective brand safety organizations. That system guarantees that advertising dollars flow only to left-wing media brands.

"Let me explain how this works. When a conservative competitor to the legacy media arises, members of that legacy media and their political allies rush to paint such competitors as dangerous. The commentator, Kara Swisher of the New York Times, for example, told the head of YouTube that my videos at Daily Wire were a gateway drug that would lead children, including her own teenage son, to watch neo-Nazi content. Never mind the yarmulke.

"Elected Democrats pick up that same messaging. In 2017, Senator Dianne Feinstein told lawyers at Facebook, Google, and Twitter, 'You created these platforms and now they're being misused, and you have to be the ones to do something about it, or we will.' Social media companies react to incentive structures, including threats. They have responded by adopting the standards of third-party, left-wing informational safety groups, like the Global Alliance for Responsible Media (GARM). GARM purportedly sets brand safety standards, objective standards, by which advertisers and platforms can supposedly determine just what sort of content ought to be deemed safe for advertising.

"In reality, GARM acts as a cartel. Its members account for 90% of ad spending in the United States, almost a trillion dollars. In other words, if you're not getting ad dollars from GARM members, it's nearly

Ivermectin after getting COVID, White House Press Secretary Jen Psaki pressured Spotify to take action, stating, 'We want every platform to be doing more to call out misinformation and disinformation while also uplifting accurate information.' Spotify complied. Spotify, of course, works with GARM.

"So, what are the brand safety standards that GARM uses? The standards begin with inarguable things that we've heard from the other witnesses, like preventing the distribution of child sexual abuse material or stopping terrorism. But GARM doesn't draw the line at what is criminal, abusive, or dangerous. Their standards also include restrictions on hate speech, harassment, misinformation, or, my personal favorite, insensitive, irresponsi-

ble, and harmful treatment of debated, sensitive social issues. Those criteria are highly subjective in theory, and they are purely partisan in practice. For example, last year, Daily Wire host, Matt Walsh, was fully demonetized on YouTube, a GARM member. Why? For quote-unquote misgendering, which to GARM, is to say that men are not women. Perfectly obvious facts now run afoul of GARM's censorship standards. "Companies targeted by

impossible to run an ad-based business. And if you're not following their preferred political narratives, the ones that Kara Swisher and Dianne Feinstein would follow, you will not be deemed brand safe. Your business will be throttled. We at Daily Wire have experienced this firsthand. In 2017, after Senator Feinstein made her threats to bring the weight of government down on social media platforms, the Daily Wire YouTube channel saw a 1,000% increase in content enforcements over a two-year period. Since 2021, after Democrat officials further turned up the heat on social media companies, my personal Facebook page has seen an over 80% drop in impressions.

"Or take Joe Rogan. When Joe said that he had taken

GARM, like the Daily Wire, Breitbart, Fox News, and so many others, reach hundreds of millions of people with opinions and beliefs long established as within the mainstream of American conservative thought. GARM and its members have no respect for the beliefs of those people. They would like them marginalized or squashed. It's time to stand up for the First Amendment in this Congress."

Systematic Differences in Mortality

Continued from p. 1

Such systematic differences in mortality and underlying structure are captured by hierarchical cluster analysis using a panel of (yearly) time series, including, to some extent, the likelihood of persistent excess all-cause mortality into 2023. Excluding borderline cases, 28 of 79 countries (35%) with sufficient data have a high statistical certainty of persistent and significant excess all-cause mortality from peak residuals extending out from 2022, and accidentally large values: Australia, Austria, Belgium, Brazil, Canada, Denmark, Ecuador, Egypt, Finland, Germany, Ireland, Israel, Italy, Japan, Lithuania, Netherlands, Norway, Portugal, Puerto Rico, Qatar, Singapore, South Korea, Spain, Sweden, Taiwan, Thailand, United Kingdom, and USA. More research is needed to elucidate this phenomenon.

Inconsistencies that disprove the hypothesis of a viral respiratory pandemic to explain excess all-cause mortality during the COVID period are seen on a global scale and include the following:

- Near-synchronicity of onset, across several continents, of surges in excess mortality occurring immediately when a pandemic was declared by the World Health Organization (11 March 2020), and never prior to pandemic announcement in any country
- Excessively large country-to-country heterogeneity of the age-and-health-status adjusted (P-score) mortality during the COVID period, including across shared borders between adjacent countries, and including in all time periods, down to half-years
- Highly time variable age-and-health-status-adjusted (P-score) mortality in individual countries during and after the COVID period, including more-than-year-long periods of zero excess mortality, long-duration plateaus or regimes of high excess mortality, single peaks versus many recurring peaks, and persistent high excess mortality after a pandemic is declared to have ended (5 May 2023)
- Strong correlations (all-country scatter plots) between

excess all-cause mortality rates and socio-economic factors (esp. measures of poverty) change with time (by year and half-year) during the COVID period between diametrically opposite values (near-zero, large and positive, large and negative) of the Pearson correlation coefficient (e.g., Figure 29, first half of 2020 to first half of 2023)

One might tentatively add:

- No evidence of the large vaccine rollouts ever being associated with reductions in excess all-cause mortality, in any country³
 - Exponential increases with age in excess all-cause mortality rate (by population), consistent with age-dominant frailty, rather than infection in the limit of high virulence
- We describe plausible mechanisms and argue that the three primary causes of death associated with the excess all-cause mortality during (and after) the COVID period are:
1. Biological (including psychological) stress from mandates, such as lockdowns and associated socio-economic structural changes
 2. Non-COVID-19-vaccine medical interventions, such as mechanical ventilators and drugs (including denial of treatment with antibiotics)
 3. COVID-19 vaccine injection rollouts, including repeated rollouts on the same populations

In all cases for all three identified primary causes of death a proximal or clinical cause of death associated (such as on death certificates) with the quantified excess all-cause mortality is respiratory condition or infection. Therefore, we distinguish (and define) true primary causes of death from the pervasive and accompanying proximal or clinical cause of death as respiratory.

We understand the COVID period mortality catastrophe to be precisely what happens when governments cause global disruptions and assaults against populations.

We emphasize the importance of biological stress from sudden and profound structural societal changes

and of medical assaults (including denial of treatment for bacterial pneumonia, repeated vaccine injections, etc.). We estimate that such a campaign of disruptions and assaults in a modern world will produce a global all-ages mortality rate of >0.1% of population per year, as was also the case in the 1918 mortality catastrophe.

The Rule of Law

Safeguarding The Military, The Police, Their Families, and The Citizens of Canada

By PoliceOnGuard.ca

We are a group of retired military and police personnel dedicated to ensuring the safety and well-being of you, your families, and all Canadians.

The recent release of the Edmonton Police Service's grassroots investigation into its COVID-19 pandemic response provides irrefutable evidence that severe harms were knowingly inflicted during the alleged pandemic response. Existing laws were in place to prevent such harm, yet these laws were knowingly violated by those in authority who are criminally and morally responsible for ensuring the safety and well-being of the people they represent. This includes the Edmonton City Police Chief and members of his executive, who were fully aware that the experimental COVID-19 vaccine would cause harm before imposing this inoculation on their personnel.¹

Currently, there is concern that this abuse of authority was/is commonplace throughout all institutions within Canada, inclusive of military and police. The Canadian Armed Forces lawsuit against the Canadian Military and the Federal Government by lawyer Catherine Christensen of Valour Legal Action Centre, Edmonton, resulted in the military and government being held accountable for the harms imposed by the unlawful COVID-19 mandates.

This is a partial list of alleged offences committed by those in authority:

LEGAL REFERENCE	DESCRIPTION	SECTION
Criminal Code of Canada (CCC)	Common Nuisance	180(2)
	Intimidation	423(1)

The term "lockdown" was invented in this "pandemic." Lockdowns, normally associated with prisons, were, in fact, the use of the long studied, 15 Non-Pharmaceutical Interventions (NPIs). The use of these NPIs was known to cause far more harm than good. Yet, they were used, knowing their deadly and long-lasting effects. The use of these deadly NPIs (lockdowns), went against all Canadian Federal and Provincial/Territorial Pandemic Plans written prior to March 2020. Lieutenant Colonel (Retired) David Redman, former Head of Emergency Management Alberta, provided detailed evidence in his published Position Paper, "Canada's Deadly Response to COVID-19."²

and integrity to stand strong, refuse, and take the appropriate action as necessary.

If you are given an unlawful, unethical, or immoral order, request that it be made in writing to establish a written record for future reference, if needed.

In a civil and lawful society, our governments, military, and police must be beacons of morality. When corruption and the means to corrupt are allowed to rule, societal decay is inevitable. We are witness to this.

A criminal is a criminal. Each of us has the God-given right to protect ourselves and others when unlawfully threatened with harm, regardless of who gives the order. Holding public office or wearing a uniform is not a free pass to impose harm unlawfully—no exceptions.

Stay safe.

Three Sinister Reasons for the Push to Electric Vehicles

By Nick Giambruno

Twenty-five refrigerators! That's how much the additional electricity consumption per household would be if the average US home adopted electric vehicles (EVs). Congressman Thomas Massie—an electrical engineer—revealed this information while discussing with Pete Buttigieg, the Secretary of Transportation, President Biden's plan to have 50% of cars sold in the US be electric by 2030.

The current and future grid in most places will not be able to support each home running twenty-five refrigerators—not even close. Just look at California, where the grid is already buckling under the existing load. Massie claims, correctly, in my view, that the notion of widespread adoption of electric vehicles anytime soon is a dangerous fantasy based on political science, not sound engineering. Nonetheless, governments, the media, academia, large corporations, and celebrities tout an imminent “transition” to EVs as if it's preordained from above.

It's not.

They're trying to manufacture your consent for a scam of almost unimaginable proportions.

Here are three reasons why something sinister is going on with the big push for EVs. But first, a necessary clarification.

You no doubt have heard of the term “fossil fuels” before. When the average person hears “fossil fuels,” they think of a dirty technology that belongs in the 1800s. Many believe they are burning dead dinosaurs to power their cars. They also think “fossil fuels” will destroy the planet within a decade and run out soon—despite the fact that, after water, oil is the second most abundant liquid on this planet. None of these ridiculous notions are true, but many people believe them. Using propaganda terms like “fossil fuels” plays a large role.

Orwell was correct when he said that corrupting the language can corrupt people's thoughts

I suggest expunging “fossil fuels” from your vocabulary in favour of hydrocarbons—a much better and more precise word. A hydrocarbon is a molecule made up of carbon and hydrogen atoms. These molecules are the building blocks of many different substances, including energy sources like coal, oil, and gas. These energy sources have been the backbone of the global economy for decades, providing power for industries, transportation, and homes.

Now, on to the three reasons EVs are a giant scam at best and possibly something much worse.

Reason #1: EVs Are Not Green

The central premise for EVs is that they help to save the planet from carbon because they use electricity instead of gas. It's astounding so few think to ask, what generates the electricity that powers EVs? Hydrocarbons generate over 60% of the electricity in the US. That means there's an excellent chance that oil, coal, or gas is behind the electricity charging an EV. It's important to emphasize carbon is an essential element for life on this planet. It's what humans exhale and what plants need to survive.

After decades of propaganda, Malthusian hysterics have created a twisted perception in many people's minds that carbon is a dangerous substance that must be reduced to save the planet. Let's entertain this bogus premise momentarily and assume carbon is bad. Even by this logic, EVs do not really reduce carbon emissions; they just rearrange them.

Further, extracting and processing the exotic materials needed to make EVs requires tremendous power in remote locations, which only hydrocarbons can provide. Additionally, EVs require an enormous amount of rare elements and metals—like lithium and cobalt—that companies mine in conditions that couldn't remotely be considered friendly to the environment.

Analysts estimate that each EV requires around one kilogram of rare earth elements. Extracting and processing these rare elements produces a massive amount of toxic waste. That's why it mainly occurs in China, which doesn't care much about environmental concerns.

In short, the notion that EVs are green is laughable. It's simply the thin patina of propaganda that governments need as a pretext to justify the astronomical taxpayer subsidies for EVs.

Reason #2: EVs Can't Compete Without Government Support

For many years, governments have heavily subsidized EVs through rebates, sales tax exemptions, loans, grants, tax credits, and other means. According to the Wall Street Journal, US taxpayers will subsidize EVs by at least \$393 billion in the coming years—more than the GDP of Hong Kong. To put that in perspective, if you earned \$1 a second 24/7/365—about \$31 million per year—it would take you over 12,677 YEARS to make \$393 billion. And that's not even considering the immense subsidies and government support that have occurred in the past. Furthermore, governments impose burdensome regulations and taxes on gasoline vehicles to make EVs seem

relatively more attractive. Even with this enormous government support, EVs can barely compete with gasoline vehicles.

According to J.D. Power, a consumer research firm, the average EV still costs at least 21% more than the average gasoline vehicle. Without government support, it's not hard to see how the market for EVs would evaporate as they would become unaffordable for the vast majority of people. In other words, the EV market is a giant mirage artificially propped up by extensive government intervention. It begs the question, why are governments going all out to push an obviously uneconomic scam? While they are undoubtedly corrupt thieves and simply stupid, something more nefarious could also be at play.

Reason #3: EVs Are About Controlling You

EVs are spying machines. They collect an unimaginable amount of data on you, which governments can access easily. Analysts estimate that cars generate about twenty-five gigabytes of data every hour. Seeing how governments could integrate EVs into a larger high-tech

control grid doesn't take much imagination. The potential for busybodies—or worse—to abuse such a system is obvious.

Consider this.

The last thing any government wants is an incident like what happened with the Canadian truckers rebelling against vaccine mandates. Had the Canadian truckers' vehicles been EVs, the government would have been able to stamp out the resistance much easier.

Here's the bottom line. The people really in charge do not want the average person to have genuine freedom of movement or access to independent power sources. They want to know everything, keep you dependent, and have the ability to control everything, just like how a farmer would with his cattle. They think of you in similar terms. That's why gasoline vehicles have to go and why they are trying to herd us into EVs.

Conclusion

To summarize, EVs are not green, cannot compete with gas cars without enormous government support, and are probably a crucial piece of the emerging high-tech control grid. The solution is simple: eliminate all government subsidies and support and let EVs compete on their own merits in a totally free market. But that's unlikely to happen. Instead, it's only prudent to

expect them to push EVs harder and harder.

If EVs were simply government-subsidized status symbols for wealthy liberals who want to virtue-signal how they think they're saving the planet, that would be bad enough. But chances are, the big push for EVs represents something much worse.

Along with 15-minute cities, carbon credits, CBDCs (Central Bank Digital Currencies), digital IDs, phasing out hydrocarbons and meat, vaccine passports, an ESG (Environmental, Social, and Governance) social credit system, and the war on farmers, EVs are likely an integral part of the Great Reset—the dystopian future the global elite has envisioned for mankind.

In reality, the so-called Great Reset is a high-tech form of feudalism. Sadly, most of humanity has no idea what is coming. Worse, many have become unwitting foot soldiers for this agenda because they have been gaslighted into believing they are saving the planet or acting for the greater good. This trend is already in motion.

Trudeau Considers Additional Housing Tax

By Martin Armstrong

Inefficient politicians consistently cite additional taxation as the solution to their nation's economic troubles. The housing crisis in Canada has spread to every province. Instead of addressing availability, the disproportionate demand brought on by multiplying the nation with migrants or any of the countless fiscal policies that have contributed to inflation, the Canadian government believes it is the duty of citizens to subsidize their wealth as a temporary solution.

The Trudeau government has been trying to paint the housing crisis as a conflict between the social-economic classes. All those greedy citizens who saved for homes are preventing new homeowners from entering the market. Trudeau basically said this when appearing on the podcast Generation Squeeze, an organization that is pushing to add an annual surtax on homes over C\$1 million. They believe houses between C\$1 million to C\$1.5 million, even if a primary residence, should face a 0.2% surtax that would eventually rise to 0.5%. Homes over C\$2 million would face a 1% surtax.

What about older Canadians who have been residing in their family homes for decades? They may not necessarily be rich, but they purchased when the landscape was different. Trudeau said those who “scrimped and saved” simply fail to understand that the younger generation can no longer do the same due to the economic environment he helped to create.

I mentioned in a separate post that 13.5% of young

Canadians under 24 cannot find entry-level work. Unemployment is on the rise and young people cannot afford to save what little they have. All Canadians are feeling the constraints of inflation, with household debt rising to over 100% of GDP (Gross Domestic Product) and the debt service ratio surpassing 15.22%. People are paying for the luxury of even having debt.

This thoughtless plan does not count for the fact that home prices are continuing to rise. C\$1 million may sound high, but the average home in British Columbia is around C\$965,447, with those in Ontario facing an average price of C\$853,915. The average home cost around C\$657,145 across all provinces in 2023, but that average was only C\$391,820 just 10 years ago. The Canada Mortgage and Housing Corporation (CMHC) believes the average home will reach C\$746,410 by next year.

This is not a tax on the wealthy, though that would not be a solution; rather, this is a tax on hardworking Canadians who are struggling to maintain what they have left. This tax is in addition to the countless other grabs that the government is expecting from homeowners.

There are federal initiatives that currently spend billions on new construction, such as the Canada Housing Infrastructure Fund, which spent C\$6 billion toward new construction. What's the point of increasing the supply when you're increasing the overall population more rapidly? Trudeau did not offer ANY other solution during his interview, because he had none to offer.

Truth, Reality, Tradition, and Freedom

By WinterOak.org.uk

Silvia Guerini is a powerful contemporary critic of the techno-scientific system and the multi-pronged threat of its global agenda. She has a background in radical ecology and calls for a new 21st-century resistance that goes beyond the “stale and dusty categories” of “right” and “left.” What is at stake today, she says, is the very future of humanity, with a historic clash taking place between “two opposing visions of the world, of the living, of nature, of human beings.

“There are no more excuses. We can no longer wait for those who do not want to understand, those who pursue marginal projects, those who do not have a total and clear-cut critique of every aspect and every fundamental element in the transhumanist project. We need to find a firm shore, that line of resistance for those of us who are determined to remain anchored to reality, in defence of humanity and in defence of all that is living.

“Let’s form alliances to repel the transhumanist vanguard.”

One such alliance was in evidence when two groups in which Guerini is involved in Italy—Resistenza al nanomondo and FINAARGIT (Feminist International Network Against Artificial Reproduction, Gender Ideology and Transhumanism)—protested outside the Milan Baby Fair in 2023.

Their action was supported by feminists from Genoa and Milan by a Catholic network drawing support from various cities in Italy and by a Marxist group from Milan that also opposed the “Green Pass” (vaccine passport).

Guerini has warned that the growth of the artificial reproduction industry threatens to lead to what she calls “a world without mothers.” In an article for the French journal *Ecologie & Politique* in 2022, she explained that the eugenicists behind test-tube babies and surrogate motherhood now had their sights on genetic engineering and artificial wombs, which would cut women out of the reproductive process. While the current justification for the technology was on medical grounds, helping people who could not have babies naturally, the long-term goal for the industry was no doubt to make artificial reproduction the norm and turn babies into yet more industrial “products.”

Guerini wrote: “The use of your own body would be considered a sign of social inferiority and poverty. A natural mother would be considered potentially irresponsible, like mothers who currently opt for home birth, refusing the hospitalization and medicalization of the process ... Natural childbirth would first be treated as irresponsible, then criminal.”

Artificial wombs would eventually be demanded, or rather marketed, as a “right” for everyone, including “transgender” people, she predicted. Indeed, she noted that “the interests and the demands of the LGBTQ+ movement and transfeminism on the subject of reproduction converge with those of the techno-scientific and transhumanist system.”

What was involved, she set out in her 2023 book *From the ‘Neutral’ Body to the Postmodern Cyborg: A Critique of Gender Ideology*, was “a new synthetic identity, a dissociation from one’s sexed body and a claim to new rights bestowed by a progressive, rainbow and transgenic left together with LGBTQ+ organizations and the pharmaceutical and bionanotechnological apparatus. This is not a grassroots movement, it is an elite project, a lot of money is being invested to promote a dissociative body condition that unties us from our sexed bodies. The LGBTQ+ cause is now high on the agenda of the powerful, and its advocates are at the top of the media, in academia, and especially in Big Business, Big Philanthropy, and Big Tech.”

“The glittery trans industry is now attacking girls, boys, and adolescents. The pressure exerted through social media, print, and television and in every cultural sphere, especially in a progressive culture, is becoming stronger and stronger. A further worrying element was the parallel officially-approved sexualization of children, which will also serve to clear pedophilia as a new ‘sexual orientation.’” [Framed as MAP, Minor Attracted Person.]

Guerini took issue with the way that fluidity and deconstruction of meaning were today being presented to us as “progressive.” She observed: “Fluidity is the antithesis of density, of that which persists, which does not change, which endures and provides a foothold in the

earth. The human being, conceived like any fluid, is supposed to be able to take on any form someone may want it to take.”

“No girl and no boy is born in the wrong body ... We do not have a body, we are our body and many of our experiences originate from that very body. What we were witnessing,” she said, “is an attack on life, on nature, on what is born, as opposed to artificial.”

“All ties to the real, natural world must be severed. Everything must be artificial, synthetic, and virtual.” And, she warned, the price for so-called “emancipation” from the living and its natural constraints is “submission to the technological constraints of the machine world.”

Transhumanist ideology, embodied in the projects and aims of Silicon Valley, major research hubs, various foundations, and international groups, seeks to dispose

of living processes and bodies. The end goal is to “transform the human being and everything living into the artificial, cybernetic and engineered world,” which would then be declared to be the only possible and imaginable world.

This would involve, Guerini has written elsewhere, the complete eradication of our sense of identity, “the tearing and subjugation of the deepest spirit of the human being,” and ultimately the cancellation of the “very sense of humanity.” **A total demolition of the previous forms of existence is underway:** how one comes into the world, biological sex, education, relationships, the family, even the diet that is becoming synthetic. “There must be no room for what will be deemed obsolete and a hindrance to the imperatives of the techno-scientific system.”

Children besieged with propaganda

With books re-written to align with the global agenda and the content dumbed down, future generations’ ability to think is being deliberately stunted, she pointed out. “Fewer words, less difficult words, fewer and poorer sentences and phrases, less but more ideologically oriented sense and meaning, less narrative variety, and poorer and poorer narratives about the world. Everything is sweetened and glittered.”

This targeting of children, notably when they are at school and beyond the protection of their families, amounts to a deliberate program of social engineering. “There is no need to burn books, just rewrite them. It is an attack on the capacity to develop critical thinking and thus on the very possibility of developing critical awareness. It is an attack that begins to mould girls and boys from an early age, building empty, superficial, depthless, sterile, neutral, fluid individuals, for a voluntary servitude necessary for the transhuman and posthuman project. New generations are the testing ground for the new world order, which is why it is so central to tear children away from families, to hand them over to technicians in white coats who will mould them according to the new transhuman dictates.”

In a December 2023 “Truth in Science” lecture for the Sinclética Monastic School, Silvia Guerini stressed the unimaginable severity and scope of the separation being planned for us. “We are moving towards a complete dissociation from ourselves, from procreation, from life, from death, from reality, from truth. Today, everything that belonged to the past must be regarded as obsolete, as an error, as something continually to be overcome, in an overcoming that will never end. **The past becomes something to be erased in order to break the thread that binds us to a history, to a tradition, to a belonging, for the transition towards a new uprooted humanity, without past,**

without memory, without a present and a future that can be held up precisely on the past, a new humanity dehumanized in its essence, totally in the hands of the manipulators of reality and truth.”

As Guerini has written, the removal of cultural identities and the loss of rituals and traditions “means making a people empty and fragile,” the perfect targets for manipulation by the “shapers of men” who have dispossessed their lives of real meaning.

Referencing the work of Ernst Jünger, she wrote: “The human being, reduced to a spectre, can only wander among the ruins, the rubble, and the deserts.” For Guerini, in the face of this great uprooting from the healthy and natural soil of “wild and free” living, we urgently need to reaffirm reality and truth: “**If there is no reality and if there is no truth, there can be no freedom either.**” The

impulse for truth is a necessary condition for there to be cohesion within a community, in her view. “Truth is the existential foundation of the human. Its disintegration runs parallel with the disintegration of society and any community.” To counter this disintegration and the associated “desacralization of existence,” we should remember that there is “a Truth that comes from elsewhere, that we can grasp, feel, that is there, that comes from afar, that is handed down. It is the Truth of Tradition and Spirit. We must return to the setting of the rhythm of our lives by ritual, by the cycle of the seasons, by the cult of the dead, by the recovery of traditions.”

“Each community has a bodily and a spiritual dimension and weaves a bodily and spiritual bond with the place where it lives. Through rituals, the community recognizes itself and its place in the world beyond the contingent moment. Rites contribute to rooting and making a single existence endure in a time, in a

territory, in a community. They create the spirit of a rooted community. They create a link beyond contingency, a recognition of what remains beyond our time. They create a common rhythm in relation to things, to time, to the natural world, to other living beings, they allow a resonance.”

Throughout her work, Silvia Guerini never shies away from the seriousness of the situation humankind is facing or the difficulty of overcoming the threat. But at the same time, she insists on the vital need to push aside our fears and engage in the great battle for the future. “The storm is coming. Let the free spirits rise to fight without expectations, without calculations, without justifications. We must be willing to fight even a losing battle to keep the sense of humanity free from the machine-world, to transmit to those who will come another sense of life. Under the rubble, fires will burn which will, just as we are already doing, keep alight a path of resistance.”

A Fork in the Road

By Toby Rogers

We must choose between two radically different futures.

Just imagine for a moment what the world will look like if we do NOT win:

1. The soulless idiotic grifters—Fauci, Offit, Hotez, Califf, Cohen, Marks, etc.—will continue to be the gatekeepers and create the official narrative on all things related to vaccines.
2. The CDC will keep adding more and more vaccines to the schedule—100, 110, 120—a shot every time you visit any doctor from now until you die “suddenly and unexpectedly.”
3. Autism rates will continue to climb. Autism prevalence is already at 8% to 10% in Black and Latino communities. Within the realm of possibility in the next decade are 15% to 20% autism rates.
4. Chronic illness will afflict an ever-growing share of the population. Currently, 54% of kids already suffer from one or more chronic illnesses. On the present course, 80% to 90% rates of chronic illness in the adult population seem well within the realm of possibility.
5. The DoD (Department of Defense), WHO (World Health Organization), BMGF (Bill & Melinda Gates Foundation), and UNC (United Nations Command) will continue to release new gain-of-function viruses every two years, anytime Pharma’s profits sag, or whenever there’s an election that they need to win.
6. Pharma will keep cranking out gene therapies that have negative efficacy while making people sick, causing infertility and birth defects, and increasing all-cause mortality by 15%.
7. The mainstream media will continue hyping pandemics every day with ominous onscreen death trackers and breathless reporting from people who have no idea what they are talking about and are probably AI (Artificial Intelligence) anyway.
8. Athletes will keep collapsing from cardiac arrest during games. Medics will just rush onto the field to pick up the dead and dying and the game will go on as if it has always been thus. Musicians will keep cancelling shows for unexplained reasons. Celebrities and everyday citizens in the prime of life will keep dying with no official cause of death ever declared.
9. Doctors, scientists, and professors will keep saying “Oh gee golly shucks, whatever could it be!” while not discovering anything of importance because they are always looking in the wrong place for the answers.
10. Tax revenues will decline, and double-digit inflation will be the norm as there are not enough workers to produce goods and services. The federal government will keep printing more money to cover debts it never will be able to repay.
11. AI will become more and more essential to daily life because people are so cognitively impaired. However, AI makes less and less sense because it is training on large language models filled with nonsense and controlled by corporate-friendly algorithms.
12. Polarization in society will increase as people get madder and madder that nothing ever works like it used to. They will blame each other for the collapse of society that is actually being brought about by vaccines.

We don’t have to *imagine* any of that because all of it is already happening.

Now, just for a moment, allow yourself to imagine what the world will look like if we DO win (if our ideas become hegemonic).

Here is a revolutionary wish list. One day, I hope it becomes our lived reality:

1. The genocidal gatekeepers will be discredited, prosecuted, and jailed for crimes against humanity. In their place, will rise the leaders of tomorrow who actually understand the problem—Joe Ladapo as Surgeon General, Aaron Siri as Attorney General, and nine warrior moms and dads on the U.S. Supreme Court.

2. The repeal of the 1980 Bayh-Dole Act, the 1986 National Childhood Vaccine Injury Act, and the 2005 PREP (Public Readiness and Emergency Preparedness) Act. Liability protection for corporations will be permanently banned. Medical freedom will be added to the U.S. Constitution.
3. The U.S. will exit the World Health Organization. The assets of the Bill & Melinda Gates Foundation and Wellcome Trust will be seized and paid out as reparations to the vaccine injured. The FDA (Food and Drug Administration), CDC (Centers for Disease Control), and NIH (National Institutes of Health) will be turned into vaccine holocaust museums.
4. We will subsidize organic food production and place taxes on pesticides and herbicides. Agriculture will be based on healthy soils, supported by strong families and strong communities. Food will have actual nutrients in it again.
5. Doctors will be doctors again—listening to patients and their own intuition and experience. Individualized (N-of-1) medicine will become the standard. Payments will be reasonable, transparent, and based on respect. Hospitals should not behave like used car dealers.
6. Scientists will do research again instead of just engaging in regulatory capture. Actual research is difficult and slow. But we’re never going to get

innovation again so long as Pharma is free to just buy the regulators and politicians.

7. Children will be healthy again—laughing, playing, and socializing with each other. Prevalence rates will decline to near zero for autism, ADHD (Attention Deficit Hyperactivity Disorder), autoimmune disorders, childhood cancers, eczema, and epilepsy.

Declining chronic disease rates will massively increase the resources available for those with chronic ailments.

8. Chronic illness and pain will massively decline, which will also drive down healthcare costs as people are able to enjoy active lives again. People who are not dealing with inflammation and scarcity every day will also be better equipped to respect difference in our society.

9. Seniors will be able to enjoy their golden years with their memories intact, surrounded by extended family.

10. Mass shootings and school shootings will sharply decline as people are no longer neurologically injured by vaccines, and no

longer hepped up on psychopharmaceuticals that cause suicidal and homicidal ideation.

11. Healthy, clear-headed people will be better able to spot the lies of Artificial Intelligence and push back against this technological invasion in our lives.

12. The economy will reward innovation and provide dignity for hard work again, with 3% to 5% growth every year. Healthy and sane employers and employees produce better products that improve people’s lives. Inflation will decline to 1% to 2% as competition keeps prices in check.

That’s my *why*. The world is awash in misery and death as a result of bad policy and bad law. But an entirely different future is possible if we choose to make it so.

Of course, we also have to figure out *how* to get from here to there. But for now I think it’s helpful to gain clarity on the road we are on and the better road we seek to travel.

What would you add to each of these lists?

**Blessings to the warriors.
Prayers for everyone fighting to stop the iatrogenocide.
Huzzah for those who are building the parallel society our hearts know is possible.**

Canada Must End All Quotas and Race-Based Hiring Preferences

By Spencer Fernando

Amid the latest scandal involving [House of Commons] Speaker Greg Fergus, it’s worth remembering that he previously claimed he’s held to a higher standard because he’s the first racial minority to serve in that role.

This is a convenient thing for Fergus to say, but it’s wrong. Fergus isn’t being criticized because of his race, he’s being criticized because he is doing a terrible job as Speaker. And this speaks to a deeper problem in our country.

More and more, we see people use a sense of victimhood to justify poor performance. The federal government incentivizes this with racial hiring preferences that destroy the concept of meritocracy.

Racial hiring preferences are discriminatory, because

instead of judging someone by their skills and actions, people are judged by their race. Hiring a minority just because they are a minority is just as wrong as denying someone a job because they are a minority.

Canada literally cannot afford to keep perpetuating this kind of racial division, nor can we afford the inefficiency caused by politically-correct quotas. We diminish productivity and diminish innovation when less qualified people are hired to meet political objectives.

We need to end all of those quotas and race-based hiring preferences. We must treat each person as an individual, hire the best people—regardless of background—and ensure that our society rewards those who are productive and ambitious, rather than rewarding those who play the victim.

The Twisted Road of Inclusion

By Gerald Heinrichs

In 2023, the Ottawa Girl Guides announced they would not participate in the local Santa Claus Parade. CEO Shannon Benner said the holiday event was unacceptable because it was not “inclusive.” Meanwhile, the University of Western Ontario published an Inclusive Language Guide. The Guide says that “using words that are not inclusive can be offensive.” The 44-page document has a long list of taboo words, including mother, girlfriend, senior citizen, alcoholic, minority, sister, husband, and kids.

No one can say when “inclusion” became the buzzword for so many institutions. But, it has caught on. Governments, universities, non-profits, and others have rallied around the word like moths to a streetlight.

The inclusion word is a spider with many legs. Organizations like Inclusion BC use the word in a non-offensive way. They use it to promote hiring persons with disabilities. But for every good use of the word, there are strange and bad ones.

Sometimes, inclusion means behaviour modification. For example, the Royal Bank says on its website that employees must be pro-active and must not “remain silent when confronted with non-inclusive behaviour.” Furthermore, employees are told, “Find your voice and use it to speak up for inclusion.”

Similarly, the Canadian Armed Forces have written a “Directive on the Integration of the Measurement of Inclusive Behaviours.” The department’s Message to Defence Team Members says that all forces members will

now “be evaluated on whether they demonstrate inclusive behaviours.”

However, the biggest inclusion issue surrounds Canada’s women. Men are now welcomed into women’s sports, washrooms, shelters, and prisons under the cloak of a woman identity. In the world of inclusion, asking to be a woman is enough. Many in high places defend this attitude of inclusion. But books like *Unsporting* and com-

mentators like Kelly-Jay Keen-Minshull (also known as Posie Parker) have scrupulously discussed the harm and crisis this version of inclusion has brought on.

Among its problems, inclusion is a slippery slope. In the name of inclusion, “chestfeeding” is now an embraced term by Public Health in Toronto and Ottawa. And *Spiked* magazine reports that the US La Leche League now gives advice on “male lactation” claiming the whole nursing issue “cannot be single sex.” The inclusion goalposts keep moving further downfield.

Of course, inclusion is part of the controversial trinity known as Diversity, Equity, and Inclusion (DEI). Some call it a good thing, while author James Lindsay says, “DEI is a cult.” PragerU broadcaster, Christian Watson, calls DEI an obsession intended to “spread division and mistrust.” He says its primary purpose is to benefit “lavishly paid DEI administrators,” which leaves many wondering, “What is the next station on the inclusion road?”

In May 2024, Germany’s parliament de-criminalized possession of child pornography. And, in recent years, radical activists are trying to abolish the word “pedophile,” replacing it with “minor-attracted person” (MAP). It is merely “a sexual orientation” says one activist. We must “overcome our negative feelings about pedophiles” and “treat them with respect” says another. So the inclusion goalposts are set to move again.

Inclusion has a power like radium. Once let in, it can cancel out things like tradition and principle. Like a crowded phone booth, when inclusion enters, other things are pushed out.

There are few signs of slowing down on the inclusion highway—turning around is nowhere in sight.

Gerald Heinrichs is a lawyer in Regina, Saskatchewan.

Seizures of Opioids Exploded by 3,000% in Ontario City After “Safer Supply” Experiment

By Matthew Hannick

Nigel Stuckey saved more lives during the last five years of his policing career than the previous three decades combined. “Every time you go back to the street, it has a different flavour,” said Stuckey, a former sergeant with the London Police Service (LPS) who retired in 2022. “As a frontline police officer, you are constantly going to overdoses in the city. I’ve administered Narcan to multiple people, and this is just something that never existed before.”

Stuckey first noticed a dramatic increase in overdoses and drug-related crimes occurring throughout his city—London, Ontario—in 2019. While the reasons behind this increase were initially unclear, recent data, released by the LPS, suggest that “safer supply” programs may be contributing to the problem.

Safer supply programs aim to save lives by providing drug users with pharmaceutical-grade alternatives to the untested street supply. That typically means distributing hydromorphone, a heroin-strength opioid, as an alternative to illicit fentanyl. However, addiction experts say the program is having the opposite effect, as many people who are enrolled in safer supply programs are illegally selling or trading their prescribed hydromorphone on the black market, a practice known as “diversion.”

Harm reduction advocates claim that safer supply diversion is not a significant issue, but according to an investigation into LPS seizure data by journalist Adam Zivo, the number of hydromorphone tablets seized in London increased by 3,000 per cent after access to safer supply was greatly expanded in 2020.

In 2019, the LPS seized fewer than 1,000 hydromorphone tablets. This number jumped significantly in 2020 and continued to rise afterwards, reaching 30,000 tablet seizures last year—an unprecedented amount. The London police estimate that last year’s record will be met or exceeded by the end of 2024.

Doctors have said that this is only representative of a small fraction of what is actually out there, and that just 3-4 of these pills, if snorted, are enough to induce an overdose in a new user.

Some people are wondering why this data wasn’t released months, if not years, earlier

Dr. Sharon Koivu, a London-based addiction physician, was among the first to recognize the harms of safer

supply, and has been warning the public about widespread diversion for years. Based on her clinical experiences, she believes that diverted safer supply hydromorphone is causing new addictions and falling into the hands of youth.

When Koivu tried to speak out against safer supply and call attention to diversion and an overall lack of program transparency, she was bullied and told that the suffering she was witnessing didn’t exist, yet the London police had quietly possessed data showing that she was

right all along.

“It’s become an ideological thing,” she said. “People seem to have doubled down on the information they have. They don’t want to hear from someone who has information and concerns that don’t align with their, I’m going to say, ideology, because it’s not science.”

News of skyrocketing hydromorphone seizures might have remained hidden from the public had it not been for a major bust earlier this year.

On April 12, the London police announced a drug seizure which included 9,298 hydromorphone eight-milligram tablets. When Zivo inquired into this seizure, he received no answers to his questions for almost two months. He says that he was “stonewalled” and that the police seemed unwilling to release key data until it became impossible for them to do so.

Zivo found it particularly concerning that the 2019-2023 hydromorphone seizure data was not released earlier. “Journalists and addiction physicians have been trying to raise the alarm about this issue for years,” he said, “but have been called liars, grifters, and fearmongers, despite the fact that data validating their concerns existed and

was held by the London Police Service.”

Stuckey, who now works as a documentary filmmaker covering London’s homelessness, addiction, and mental health crisis, had a similar experience when he queried the LPS about the 9,298 hydromorphone pills seized this April.

Despite multiple requests for information about a possible connection to safer supply, the police service did not get back to him. He expressed frustration at the police’s unresponsiveness and worried that a lack of government transparency is endangering both the general public and law enforcement officers.

“Members of the London Police Service are being put in harm’s way dealing with organized crime and firearms to take drugs off the street, which were provided by the federal government. It’s absolute lunacy that we are paying one branch of government to rid a problem that was created by another branch of government,” said Stuckey.

It would be deeply concerning if the LPS knowingly withheld data pertaining to safer supply diversion. Not only has the failure to publish such data hindered informed public debate and policy development, it has also compromised the safety of the very communities which police are tasked with protecting.

According to Zivo, safer supply programs have benefitted from the silence of powerful institutions like the LPS. He said that, as there seems to be significant institutional resistance to acknowledging the community harms of safer supply, then more attention and trust should be given to local grassroots-level addiction medicine practitioners “who are bravely testifying to what they are seeing in their clinics.”

However, Dr. Koivu thinks that “the tide is turning” and that more people are beginning to understand the harms of safer supply.

“I think it’s unfortunate that this data wasn’t made available sooner when it was relevant to the funding of these programs and the changes we’re seeing in the city. The police need to be accountable for that. I really don’t understand their rationale for not addressing this,” she said. “They hung me out to dry while knowing that what I was saying was accurate. If the police are afraid to come forward, no wonder physicians are afraid to come forward, too.”

Absurdity Observer

Some Of The Most Absurd Things That Have Happened In Recent Weeks

- A new bombshell study finds a direct correlation between COVID mRNA shots and the surge of sudden deaths. The study, "Differential Increases in Excess Mortality in the German Federal States During the COVID-19 Pandemic," conducted by renowned professor Christof Kuhbandner, PhD, and mathematician Prof. Matthias Reitzner, found that "the increase in excess mortality, an increasingly strong positive correlation with the vaccination rate of a federal state is observed, which reaches a value of $r = 0.85$ in the third pandemic year, indicating that excess mortality increased the stronger the higher the vaccination rate in a federal state was."
- A group of Canadian doctors have issued an emergency warning over an "alarming 3000% increase in unexplained child deaths" in Alberta. "Coincidentally," the surge in child deaths emerged after the rollout of the Covid mRNA shots in early 2021.
- New government records reveal that Canada's ambassador for climate change has racked up a bill of \$254,000 in travel expenses in less than two years of being appointed. Access to Information and Privacy (ATIP) records obtained by Blacklock's Reporter found that Catherine Stewart billed taxpayers for short-distance flights (when trains were an option) and stays in luxury hotels, which cost as much as \$623 a night.
- Biden officials pushed to remove age limits for trans surgery, documents show. Emails recently released during a court proceeding indicate that US health officials lobbied to remove age minimums for surgery in minors. Documents revealed that, Rachel (formerly Richard) Levine, Admiral in USPHSCC (the United States Public Health Service Commissions Corps) and US Assistant Secretary for Health, felt that age limits could result in devastating legislation for trans care for those under age 18 and asked to have age limits removed.
- A study that looked into the effectiveness of lockdowns during COVID across 181 countries (Bendavid et al.) finds "no clear pattern" between the incidence of COVID-19 (including cases, deaths, and all-cause excess deaths) and the level or restrictions. As the authors put it, "We are left to conclude that strong claims about the impact of government responses on the COVID-19 burden lack empirical support."
- Former director of the CDC (2018-2021), Dr. Robert Redfield, admitted to the Senate Committee on Homeland Security and Governmental Affairs that "one of the greatest mistakes" we made was vaccine mandates. Redfield claimed that the Biden administration insisted that the CDC suppress data on adverse reactions in order to maintain confidence in the COVID vaccine. He stated: "They don't prevent infection and they do have side effects ... There was not appropriate transparency from the beginning about the potential side effects of these vaccines, and I do think there were inappropriate decisions by some to

try to underreport any side effects because they argued that would make the public less likely to get vaccinated."

- As Canadians struggle with the high cost of living, Prime Minister Justin Trudeau's government decided to use taxpayer money to purchase a \$9 million luxury condo in New York City for the consul general to New York (and former legacy media journalist) Tom Clark.

- According to a recently released expert report by the former head of the FDA, Dr. David Kessler, Merck misrepresented the efficacy of its mumps vaccine for decades, marketing an adulterated drug without proven efficacy to millions of American children. Merck has known since 1998 that their M-M-R"II vaccine violated FDA regulations by not maintaining the stated potency over its shelf-life. Rather than recalling the vaccine or attempting to develop a different formula, the company instead spent years trying to develop new and more sensitive ways to test the existing vaccine so it would falsely show high efficacy results and be compliant with regulatory requirements.
- In a surprising turn of events, Dr. Stanley Plotkin, widely regarded by the establishment as "the world's leading vaccinologist," along with his pro-vax disciples, just admitted in an article published in the New England Journal of Medicine (Salmon et al.) that vaccine safety is not rigorously studied, despite decades of asserting otherwise. They admitted, for example, "prelicensure clinical trials have limited sample sizes [and] follow-up durations" and that "there are

not resources earmarked for post authorization safety studies" and, "In 234 reviews of various vaccines and health outcomes conducted from 1991 to 2012, the IOM [Institute of Medicine] found inadequate evidence to prove or disprove causation in 179 (76%) of the relationships it explored, illustrating the need for more rigorous science."

- As reported by viral immunologist, Dr. Byram Bridle, newly-uncovered documents reveal significant public health data about COVID shots that the BC Centre for Disease Control was misrepresenting. The 1,315-page report, obtained through an Access to Information and Privacy (ATIP) request, indicates a 15.7-fold increase in serious adverse events following COVID shots compared to historical flu shot data. Additionally, there were 13.6 times more hospitalizations and 24 times more deaths than those associated with flu vaccinations.
- Federal public health authorities didn't know if COVID-19 vaccines would prevent transmission, but they foisted sweeping vaccine mandates on Canadians anyway. In response to an Order Paper question from Conservative MP Colin Carrie, Canada's Parliamentary Secretary to the Health Minister has just admitted they were never certain COVID-19 vaccines prevented transmission, but implemented its vaccine mandate and segregation policies.
- A huge new Oxford study (Andrews et al.) of over 30,000 children found no benefit from COVID injections for children. The preprint study did, however, find that COVID vaccinated children were 20% more likely to experience an unplanned hospitalization for any cause after their first injection.
- The 2024 Paris Olympics' opening ceremony included a hyper-sexualized drag queen performance with child dancers present.
- A North Bay business owner has been convicted of 36 charges for non-compliance during COVID-19. Alexandra Stewart's business, Stewart's Decorating, is facing fines of up to \$25,000 per day for non-compliance.
- A peer-reviewed study (Jung et al.) of 9.2 million South Koreans published in Nature Communications uncovered a stunning 620% increased risk of myocarditis and 175% higher risk of pericarditis following mRNA COVID-19 vaccination. Researchers also noted increased risks of several autoimmune conditions, especially after booster doses.
- In an interview at the International Symposium of Pediatric Updates, vaccine advocate and pharmaceutical industry insider, Dr. Peter Hotez, said he favors deploying police and military powers against "anti-vaxxers," whom he blamed for causing hundreds of thousands of deaths during the pandemic. Hotez suggested organizations, such as the World Health Organization (WHO), the US Department of Homeland Security (USDHS), and North Atlantic Treaty Organization (NATO), should target "anti-vaccine aggression," because "this [anti-vax thinking] is now a lethal force."
