## The Reality of Trade Wars

By James Corbett | [corbetteport.com](https://corbetteport.com)

We all know the ancient Chinese curse: May you live in interesting times! Oh, okay, it's not ancient, and it's not Chinese, but it's a good curse, nonetheless. And it's hard to think of a more apt description of 2025 than "interesting."

It seems like every day this year, there's been a new blockbuster story to displace yesterday's blockbuster story from the 24/7 doomscroll feed.

Israel is preparing a "Hell Plan" for Gaza.

The EU is creating its own army and setting up its own nuclear deterrence.

A 108-year-old Japanese woman has just been recognized as the world's oldest female barber.

Truly, we are living in world-historical times.

Given all of these amazing events, it would be easy to overlook the decidedly less-sexy story about tariffs and trade disputes. But if we *do* ignore the global trade war that is currently brewing, we run the risk of overlooking one of the most important stories of all.

As we shall see, the trade war isn't just a spat over the flow of fentanyl or the price of aluminum. It's about the future of the global economy and, ultimately, the next Great Powers war. In other words, the future of you, your family and civilization itself is on the line here.

Today, let's explore what's happening, why it's happening and what you can do about it.

### The Trade War Starts

Oh, what a difference a week makes!

Just last week, the stock markets were riding high, the bankers were predicting solid global economic growth in 2025, and Canadians and Americans thought some booing at a hockey game was about as vicious as things were going to get between the two countries this year.

Cut to this past Thursday: the Dow Jones was down 1,300 points, bankers were slashing their economic predictions, and Canadians had already started boycotting Kentucky bourbon and threatening to cut off energy exports to their neighbour to the south.

So, what happened? A trade war happened, that's what.

Specifically, the deep state that operates the puppet known as Donald Trump enacted a 25% tariff on Canadian and Mexican goods and a 20% tariff on Chinese goods because of... *checks notes*... fentanyl? or dairy? or cars? or something. The point is Canada and Mexico have been taking advantage of

Uncle Sam, and it's about time they pay! What idiot signed this horrible Canada-US-Mexico trade agreement, anyway?

Oh, right.

Well, never mind all that! The war is over! Trump's deep state handlers have promised (another) one month pause on (some of) the tariffs!

ing on its own trade deals, threatening to rip up security pacts that it wrote in the first place and musing about invading its erstwhile allies.

Now, as conspiracy realists who were certainly not fans of the Old World Order, we might be tempted to cheer this whole spectacle on. "Good! Let the system burn!"

But unfortunately a trade war is never just a trade war, and this international firestorm isn't about cutting a better deal for the average working stiff.

In fact, when you start to look at what this trade war *really* portends, things get very dark very quick.

### The Reverse Kissinger

Okay, obviously, this trade war isn't about the 43 pounds of fentanyl that crossed from Canada into the US last year. And it's not about the price of tea in China. Heck, it's not even about the price of milk in Saskatoon. So, what is it about?

Well, one theory that's been floated (and denounced!) by the inside-the-Beltway policy wonks is that Trump is attempting a "reverse Kissinger."

You see, back in the depths of the Cold War, Henry Kissinger—at the behest of the Rockefellers, naturally—flew to China for a top-secret mission to normalize relations between the US and China. It might be hard for those who weren't around at the time to understand it, but the US establishing diplomatic relations with communist China in the midst of a Cold War against communism was utterly shocking.

As we now know, Heinz' visit helped to plant the seeds of the Rockefeller-backed China World Order that have sprouted here in the 21st century. But there was a Machiavellian geopolitical strategy in this ploy as well. Kissinger and his deep state handlers reasoned that by bringing the Chicoms into the globalist fold, they could deepen the Sino-Soviet split and, ultimately, play their Chinese frenemies off against the Soviets.

The "reverse Kissinger" theory, then, holds that Trump's moves on the geopolitical chessboard are the new deep state's attempt to repeat the Kissinger strategy, but in reverse. According to this theory, instead of partnering up with China to isolate Russia, the Trump swamp-dwellers are partnering up with Russia to isolate China.

Seen through this lens, some of the seemingly chaotic events of recent weeks appear to add up. Disrupting America's commerce with its closest trading partners, for instance, creates a pretense for dropping sanctions against Russia. And if the US drops support for Ukraine in its war against Russia, it

See 'Reverse Kissinger' p.5

Nah, just kidding! The war continues. Less than 24 hours after announcing the pause comes the threat that Uncle Sam will be hitting Canadian dairy and lumber with new tariffs today. (Or maybe Tuesday.)

Regardless of which tariffs do or don't kick in on which particular dates, we're about to learn a funny thing about trade wars: you can *start* them with a simple declaration, but you can't *end* them the same way. The US may or may not be "pausing" its tariffs, but Canada is keeping its first wave of retaliatory tariffs in place and renewing its threat of a second round of tariffs in April. China, meanwhile, is vowing to fight back even harder after accusing the US of "two-faced acts" and of "meeting good with evil."

And that war is expanding. After Trump's threats last month to levy 25% tariffs on products from the EU, the EU bureaucrats have fired back, mulling a number of countermeasures, including "block[ing] agricultural products containing pesticides banned in the region." (But relax, everyone! The "Make America Healthy Again" administration is going to get rid of all those poisonous pesticides anyway, right?!)

Now China is hitting back...at Canada? That's right, the Chicoms have just announced \$2.6 billion in agricultural tariffs against the Great White North for levies that Ottawa introduced against China last October.

Feeling dizzy? Of course you are. But that's the point. For the New World Order to be brought in, the old order must first be destroyed, and nothing sweeps away 80 years of international relations like the world's undisputed unipolar superpower reneg-

# How I Wish Robert Kennedy had Responded to the Measles Outbreak

By Ted Kuntz | [vaccinechoicecanada.com](http://vaccinechoicecanada.com)

In response to the recent “outbreak of measles” in Texas and the death of a child purportedly from measles, Robert Kennedy Jr., the newly confirmed United States’ Secretary of Health and Human Services, responded by publishing an opinion piece on Fox News on March 2, 2025.<sup>1</sup> In the article, Kennedy states:

*“In response to this outbreak, I have directed the Centers for Disease Control and Prevention (CDC) and the Administration for Strategic Preparedness and Response (ASPR) to work closely with the Texas health authorities to provide comprehensive support. HHS’s efforts include offering technical assistance, laboratory support, vaccines, and therapeutic medications as needed.*

*As healthcare providers, community leaders, and policymakers, we have a shared responsibility to protect public health. This includes ensuring that accurate information about vaccine safety and efficacy is disseminated. We must engage with communities to understand their concerns, provide culturally competent education, and make vaccines readily accessible for all those who want them.*

*It is also our responsibility to provide up-to-date guidance on available therapeutic medications. While there is no approved antiviral for those who may be infected, CDC has recently updated their recommendation supporting administration of vitamin A under the supervision of a physician for those with mild, moderate, and severe infection. Studies have found that vitamin A can dramatically reduce measles mortality.*

*Parents play a pivotal role in safeguarding their children’s health. All parents should consult with their healthcare providers to understand their options to get the MMR vaccine. The decision to vaccinate is a personal one.*

*By 1960—before the vaccine’s introduction—improvements in sanitation and nutrition had eliminated 98% of measles deaths. Good nutrition remains a best defense against most chronic and infectious ill-*

- Acknowledged that measles mortality declined by 98% prior to the introduction of a measles vaccine; that the decline was a result of improvements in sanitation and nutrition
- Acknowledged the importance of good nutrition, most especially Vitamin A, C and D in supporting immune response
- Acknowledged his responsibility to ensure that accurate information about vaccine safety and efficacy is disseminated

Photo credit: Cristi Dangeorge / Shutterstock.com

## My disagreement and disappointment with Kennedy’s messaging are the following:

- Stating that “this outbreak has claimed the life of a school-aged child, the first measles-related fatality in the United States in over a decade.” It would appear that it is premature to conclude that measles was responsible for the death of the child.

- Stating that “Vaccines not only protect individual children from measles, but also contribute to community immunity, protecting those who are unable to be vaccinated due to medical reasons.” These two claims—protection from measles and community immunity—are questionable claims that reinforce pharma propaganda that

“all vaccines are safe and effective” and that “we have a responsibility to be vaccinated to protect others who are unable to be vaccinated.” This message is used to justify vaccine mandates and violate informed consent.

- Stating that actions will be taken “to contain the outbreak” and “bring it to an end.” What is implied is that government actions can stop the

See ‘Elephant in the Room’ p.10

*nesses. Vitamins A, C, and D, and foods rich in vitamins B12, C, and E should be part of a balanced diet.”*

I support these comments. They are sensible and factual, respect informed consent and parental authority, and contribute to a richer understanding of measles infection.

## Most notably, I appreciate that Kennedy:

- Acknowledged that the decision to vaccinate is a personal one

## FREEDOM WINS!

- **Big tobacco has been ordered to pay a historic \$32.5 billion in compensation under a settlement approved by the Chief Justice of the Superior Court of Ontario.** This landmark agreement—the largest in Canadian history and the third-largest worldwide—holds tobacco companies financially accountable for the healthcare costs tied to smoking-related diseases. The settlement resolves multiple lawsuits that claimed some tobacco giants knew since the 1950s their products were causing cancer and other illnesses and failed to warn consumers adequately.

- **The Louisiana Department of Health says it will no longer promote mass vaccination.** The state’s Surgeon General noted that conversations about specific vaccines are best held between an individual and their health care provider.

- Department of Health and Human Services lead **Robert F. Kennedy Jr. announced a controversial plan to ban TV drug ads in America.** Currently, the United States and New Zealand are the only two countries that have direct-to-consumer pharmaceutical advertisements on television. Annually, the pharmaceutical industry pays out \$4 billion in advertising dollars to media organizations.

- After decades of limited research, **the Centers for Disease Control (CDC) has made a landmark announcement: it will investigate a potential link between vaccines and autism.** This marks a profound shift in public health policy and scientific transparency. The CDC recently reported that 1 in 36 children has been identified with autism spectrum disorder— a 350% increase since the year 2000.

- The US Department of Health and Human Services, together with the Food and Drug Administration (FDA), have launched “**Operation Stork Speed**”—a plan to remove contaminants from baby formula. The initiative will include a comprehensive update and review of infant

formula nutrients, the first such effort by the agency since 1998.

- President Trump announced that **Dr. Jay Bhattacharya (co-author of The Great Barrington Declaration) will serve as the director of the National Institutes of Health** during his second term in the White House. “If confirmed, I will establish a culture of respect for free speech in science and scientific dissent at the NIH.” -Jay Bhattacharya at his Senate hearing.

- **The National Institutes of Health will be terminating more than 40 grants focused on vaccine hesitancy and ways to increase vaccine acceptance.** According to their internal notice, “It has been determined they do not align with NIH funding priorities related to vaccine hesitancy and/or uptake.”

- Department of Health and Human Services, Secretary **Robert F. Kennedy, halts clinical trials of the latest experimental, multimillion-dollar COVID-19 vaccine from US biotech company Vaxart.** Kennedy said that pausing the work order on the experiment was necessary due to “failed oversight” by Biden administration officials.

- **The Crown has withdrawn all Quarantine Act charges against a group of Ontario Amish clients.** The withdrawal follows nearly six months of legal efforts and successful negotiations between The Democracy Fund lawyers and Crown prosecutors, who acknowledged there was “no reasonable prospect of conviction.”

- **Utah is poised to be the first state to ban fluoride in public water systems.** Governor Spencer Cox confirmed his intention to sign Bill 81 into law. Nearly three quarters of the US population on community water systems receives fluoridated water.

- **The Florida Senate has passed a bill (SB 56) banning geoeengineering and weather modification,** repealing existing licensing and

reporting requirements, and prohibiting activities that alter temperature, weather, or the intensity of sunlight within the state’s atmosphere.

- **The CDC has shut down its “Wild to Mild” campaign, which encouraged flu vaccination, especially among pregnant women and children.** The move follows a directive from the US Department of Health and Human Services, urging the CDC to shift toward messaging that emphasizes informed consent in vaccine decisions after drug safety advocates criticized the campaign for its theatrics and its failure to mention potential risks.

- **An 18-year-old Ontario student has been acquitted of hate speech and mischief charges after posting flyers at his high school that contained a link to a video warning students about the risks of gender reassignment surgery.** According to the student’s defence, funded by The Democracy Fund, the video did not meet the legal threshold for hate speech.

- Environmental and health groups are celebrating **a recent ruling from the Federal Court that found Health Canada’s 2022 decision to approve the glyphosate-based herbicide Mad Dog Plus was “unreasonable.”** In their legal challenge, the groups argued that the federal regulatory agency failed to conduct a rigorous scientific assessment and that science reports have linked glyphosate-based end-use products to cancers, metabolic diseases, neurodegenerative and reproductive toxicity, and harm to ecosystems.

- **The Government of Canada announced its decision to label per- and polyfluoroalkyl substances (PFAS), commonly known as “forever chemicals,” as toxic.** These harmful substances are found in everyday products like clothing, food packaging, cookware, carpets, textiles, and water. PFAS exposure is linked to a range of serious health issues, including immune dysfunction, hormone disruption, metabolic disorders, and developmental harm.

# Yale Study Reveals Link Between Covid mRNA Vaccines and Multiple Illnesses

By Craig Mack

A new preprint medical study from Yale University titled *Immunological and Antigenic Signatures Associated with Chronic Illnesses after Covid-19 Vaccination*, (Bhattarchjee, Lu et al.)<sup>1</sup> has coined the term, post-vaccination syndrome (PVS) to describe ongoing illness in people vaccinated against Covid-19. According to the authors, the study was initiated to explore potential pathobiological features associated with PVS.

According to the study, there are three key takeaways:

1. The immune system of some who get vaccinated is altered immediately after vaccination to the extent that they have a higher risk of re-activation of latent viruses they carry, such as Mononucleosis and Epstein Barr syndrome. To quote the researchers, “*Epstein-Barr virus (EBV) reactivation was observed more frequently in PVS participants.*”
2. The researchers noted alarming T-cell exhaustion in some study participants. T-cells are used by the body to fight cancer. There is an obvious problem if these cells are exhausted following a vaccination. The study stated, “*...participants exhibited differences in immune profiles, including reduced circulating memory and effector CD4 T cells (type 1 and type 2) and an increase in TNF + CD8 T cells.*”
3. The injected spike protein does not remain in the injection site (the deltoid muscle) and is quickly expelled by the human body within 2-5 days, as claimed. In some participants, the protein circulates in the body for up to 700 days. The period it circulates could be longer, but none of the study’s participants had been injected more than 700 days previously by the time the study

was concluded. Yale’s report described this as “*elevated levels of circulating spike protein.*”

The Yale research is, of course, important for the medical community’s evolving understanding of the real effects of the injection imposed on the world’s population. It also serves as a significant vindication for those currently suffering from numerous mRNA side effects and conditions who have, until now,

been told by their doctors that the symptoms were merely in their head.

At first, of course, our once-esteemed, now generally disgraced health authorities like the Centers for Disease Control (CDC) and Health Canada claimed there were no genuine injuries from mRNA shots—that the offering from Moderna and Pfizer was unequivocally “*safe and effective.*” Anyone who challenged that was, well, you know, a conspiracy theorist.

Now that this fiction has become impossible to continue supporting, there is a new narrative from scrambling health authorities. They now claim that it is only natural for a tiny number of people to suffer bad reactions out of the many millions of doses

given to the population. What is becoming clearer now is that the number of people injured is nowhere near as small as they want the public to believe. What should have always been clear is that for anyone who is injured and suffering from symptoms like brain fog, dizziness, neuropathy, and excessive fatigue, statistics don’t matter. They are the 100 percent who live with the consequences every single day.

The study makes clear the need for further research, particularly regarding T-cell exhaustion. Researchers have yet to draw any firm conclusions about the observed T-cell drop and the recently reported rise in turbo cancers, particularly in the young, since the vaccine’s rollout. Some prominent US Oncologists, including LA Times owner Dr. Patrick Soon-Shiong, are on record as interested in any follow-up research into T-cell reduction. They hope that further study will explain this unprecedented rise in cancer in the young since 2021.

In unfortunate related news, the United States Food and Drug Administration (FDA) recently confirmed that people who received Covid mRNA “*vaccines*” are at risk of suffering from a deadly blood clot for up to 15 years after they received their last injection. The FDA’s Center for Biologics Evaluation and Research admits that the “*regulatory window of concern*” for a novel genetic product, such as Covid mRNA “*vaccines*,” is 5-15 years.<sup>2</sup> This points to the possibility that the vaccinated population may be facing a wave of surging blood clots in the future.

**Anyone seeking support and assistance for injuries related to the mRNA vaccine might find it helpful to visit the support group React-19 at [react19.org](http://react19.org)**

## Another Study Suggests Long Covid is Vaccine Injury

### Mounting Evidence Gives Sufferers Hope for Proper Diagnosis

By Melvin Frohike

I felt compelled to write this short article after reading a recent local news report revealing that thousands of Quebec’s Long Covid cases remain on waiting lists to have their conditions properly diagnosed. Yes, thousands. There are 4,000 Long Covid sufferers, with 2,000 of them still awaiting diagnosis and treatment.

This is the situation a full five years after the so-called pandemic began. Of course, this deserves another separate article about the wonderful, free, modern and accessible sacred cow Canadians call public health care. However, that tired, old fiction is for another day and another writer.

When I read the local story, I asked myself if it was possible that neither the patients nor their doctors were aware of the growing body of research linking Long Covid to the novel mRNA technology recently imposed on the Canadian public by the government. What about the recent statements by former CDC Director Dr. Robert R. Redfield, who went on record in January stating that Long Covid was a vaccine injury?<sup>1</sup> Did they also not know about that?

I suppose that when you control funding, which shapes the narrative, you determine “*All the News that’s Fit to Print.*” In that way, you decide what information the public is allowed to access and what gets buried. For that reason alone, Canadians should be grateful for this independent paper and all others like it.

The new study, published in the prestigious *European Review for Medical and Pharmacological Sciences*, has found that COVID-19 mRNA injections could be behind so-called Long Covid.<sup>2</sup>

Scientists behind the study dispute previous claims that Long Covid is caused by the virus as it now appears to be a reaction to the mRNA injections. The study’s abstract states, “*Although official data state that vaccinal spike protein is harmless and remains at the site of injection, several studies pro-*

*posed spike protein toxicity and found it in blood circulation several months after the vaccination.*”

According to the study’s authors, spike protein has been detected in the bloodstream of people suffering from Long Covid many months after injection.

In line with other published research, this study demonstrates that both natural and vaccine spike protein may still be present in Long Covid patients, supporting the idea that there is a mechanism that causes the persistence of spike protein in the human body for much longer than predicted by early studies and government claims.

Interestingly, the authors note, “*Samples gathered from the unvaccinated control group were negative*

*for spike protein.*”

There exists additional expert evidence to support the study’s findings. An early Pfizer biodistribution study showed that the Covid spike protein gets into the blood after vaccination. Once in the bloodstream, it circulates for several days before accumulating in organs and tissues, including the spleen, bone marrow, liver, and adrenal glands, and in high concentrations in the ovaries.<sup>3</sup> This frightening information was reported in Druthers in early 2023.

This European research supports the growing body of scientific evidence showing that the symptoms people are suffering from may actually be yet another in a long list of vaccine adverse events. It now appears that the condition Long Covid may be caused by an immune overreaction to the spike protein in COVID-19 vaccines, which is used to induce antibodies.

Reports like this one titled “*Rare Link Between Coronavirus Vaccines and Long Covid-Like Illness Starts to Gain Acceptance,*”<sup>4</sup> which appeared in the journal *Science*, provide some small

hope for the thousands of people affected by the shots who are seeking treatment and acknowledgment of their condition’s existence.

Here’s hoping that one doctor treating so-called Long Covid or one patient suffering from symptoms that have been misdiagnosed will read this article and begin digging where they should be digging.

# How to Spot a PsyOp

By Donald Lee

This article draws heavily on the ideas of Chase Hughes, an expert in psychological operations. Check out his YouTube channel for further information.

As I watched the ascension and coronation of Mark “Carnage” over the past few months, it’s obvious to me that this was not democracy in action. This was an operation, largely a psychological operation—a psyop, also called “engineered reality.” It’s amazing to me that most Canadians have no idea. They can’t see it because they have no idea what a psychological operation is. Most live in an “engineered reality,” but I simply call it a fantasy. So, perhaps this is a good opportunity to review the nature of psychological operations, how we can detect them, and what we can do about them.

I have been involved in politics, political parties, election campaigns, and leadership campaigns for a large part of my life. I have never seen such a lopsided victory—86% of the vote going to one candidate in a field of four credible candidates, including cabinet ministers and the deputy prime minister, is unheard of. Note

also that numerous potential candidates were “disqualified,” “withdrew,” or “failed to qualify.” This has become the norm in Canadian politics. The “candidates” are pre-selected and pre-approved by “somebody.” Any real and free candidates are not allowed to take part. And, hundreds of thousands of Liberal party members were not allowed to vote, prevented from doing so by a variety of procedural and technical problems. Out of 400,000 qualified party members, only about 150,000 votes were counted. All of this is part of controlling “democracy,” communist style.

Other sources even pointed out that Mr. Carnage also got nearly the same result (86% of the votes) in every single federal constituency! This is impossible. As Sherlock Holmes used to say, “Once you remove what is impossible, whatever remains, however improbable, must be the truth.” The improbable truth is that this election was rigged. It wasn’t an election at all. Somebody selected Mark Carnage as our next prime minister and had the means to install him in that position. This is even more evidence that Canada stopped being a democracy a long time ago.

One of the mistakes in the freedom movement has been to blame Justin Trudeau for all the tyranny in the federal government. It’s human nature to want to focus our anger on an individual person, to blame one for the “sins of the many.” But it looks to me like this anger directed at Trudeau was also partly a psychological operation. Once Trudeau was out of the picture and a new “saviour” was brought on stage, public opinion shifted—or at least the controlled media tells us it shifted. Now, the Liberals are back up in the polls, and otherwise sensible people are thinking that Mark Carnage will “save” Canada. The truth is, only the actors have changed. The roles are the same. The script is the same. It’s all theatre, and the show goes on. Mark Carnage will surely do to Canada what his British detractors (and creators of the name “Carnage”) watched him do to the UK.

Interestingly, freedom people understood that Trudeau was a puppet but blamed him anyway. Trudeau was never smart enough to come up with all the ideas. He was always taking orders from Klaus Schwab, or Mark Carnage himself, or some other level of the “control system.” Trudeau is evil and foolish. Mark Carnage is evil and intelligent. That’s far more dangerous. Carnage is another Klaus Schwab stooge. He is a motherWEFer, a Bilderburger, an elite of the elite. As usual, the stories we are told about him—the public narrative—are a carefully calculated mixture of truth, lies, misdirection, and fantasy. Let’s take a look at how to separate these. That is, let’s

take a look at psychological operations in general.

## How to Spot a PsyOp

1. Analyze the source. Is it credible? Sensational? Psyops thrive on sensationalism.
2. Who owns/controls the platform? There are only about six owners of all the mainstream media platforms in North America, and all get their “information” from the same source.
3. Are multiple outlets parroting the same narrative? Psyops use coordinated messaging to reinforce a narrative—the cover story for the operation. When exactly the same narrative comes from

multiple sources, it’s usually a psyop. Real news and real life have multiple narratives.

4. The **FATE** model. This triggers the reptilian part of our mind that reacts instinctively, without rational thinking.
  - **Focus:** Is someone trying to distract your attention with repetitive content and shock? Why? Is one story/narrative being given lots of focus/airtime while other important stories are ignored? There’s a reason. Stay focused on what you know for sure, what is important in your own life.
  - **Authority:** Is this information coming from a real authority (based on knowledge/experience)? Or is this coming from a fake authority—someone in a position of power/influence but lacking real expertise or people speaking outside their area of expertise? Are authorities shifting their tone or message unnaturally to support the narrative? For example, masks are unnecessary; now masks are useful, now compulsory, now two masks—all without evidence.
  - **Tribe:** Is this dividing/polarizing people into antagonistic tribes? Creating “in” groups and “out” groups who suddenly hate each other. For example: patriots vs traitors, scientific vs deniers, Canadian vs Americans. Are you being pushed to hate people you didn’t hate yesterday? This exploits our tribal instincts—our need to belong. It’s psychologically powerful. Don’t be drawn into that.
  - **Emotion:** Beware of messages that carry strong emotion—fear, outrage, anger, hope. Strong emotions suppress rational thinking. Emotions are way more powerful than thoughts. That’s the point—to get you to react emotionally. Be in control of your own emotions. Don’t let the narrative hijack them. This is always a psyop. They control your emotions, to control your thoughts, to control your actions. Take back control of yourself.
5. Check the evidence. A fake narrative always lacks hard evidence and is promoted with opinions, lies, exhortations, logical fallacies, suppression of other voices, etc.
6. Is this going to expand government control or justify new laws? It’s likely a psyop. Notice that Mark Carnage wants more control over the “climate,” and he wants to destroy our energy industry, which means destroying Alberta.
7. Analyze coverage patterns. Real news co-exists with other stories. Psyops dominate the news cycle and drown out other stories.
8. Look for follow-ups. Real news evolves with new updates and new information. Psyops push the same narrative, then fade away once they

have achieved their purpose if the purpose is a distraction.

9. Trust your gut. Does something just feel “off?” Does it pass the sniff test? Or is it really BS? Does your “gut” tell you that Mark Carnage got ten times more votes than the deputy prime minister?
10. Cultivate critical thinking skills. Learn the most common logical fallacies, like the ad hominem attack, the red herring, the straw man, the appeal to emotion, and the appeal to authority. Look for patterns in how the media and government communicate. Are they leading you to give up power or money, and are they proposing new laws? Are they focused on fear, and/or increasing government power? That’s a psyop.
11. Timing is huge. Ask yourself, “What other scandals/issues might this be distracting us from?” Intel people call this a “dangle” to distract your attention away from something they want you to ignore. Isn’t it curious that the fear of a 25% tariff with the US has completely pushed aside the much bigger economic impact of the upcoming increase in the carbon tax? It’s a dangle.
12. Analyze the context boundary. Context defines what is permissible.

Manipulative people shift contexts to normalize extreme behaviour. What might be an acceptable suspension of freedoms in a real emergency would never be acceptable without the emergency. Often, cognitive dissonance is weaponized, and then a false context is created that makes people go along with almost anything. Canada does not have a crisis with the US. But the appearance of a crisis is being created. Ordinary, rational people are going off the deep end in their hatred for our American brothers and sisters. This response is out of context, a clear sign you’ve been psyoped.

13. Look for stock characters. Real humans are complex, with conflicting motivations. Life is never black and white, good guys and bad guys. When we are presented with stock characters—heroes, villains, saviours—the narrative is likely a psyop. A psyop will simplify every conflict, create caricatures, telling us who is the hero and who is the villain. We are led to love the hero and hate the villain. Real people and real life is far more nuanced. Look for the nuance, the complexities, of real life. Think about the complex web of personalities and lies that is the Ukraine war. It’s a psyop.
14. Be alert to rapid compliance shifts. This one is scary and it’s happening every day. Psyops create urgency to drive rapid compliance. These tactics are stuff like emotional appeals, staged group behaviours, or false consensus. Slow down and resist the pressure to act. Question the conformity. Test the message. Rapid compliance shifts are usually connected to some divisive political agenda. Notice how quickly Canadians have turned against Americans. This is a big red flag.

Whether or not you are willing to accept it, psychological operations rule our lives. They fill our minds with fantasies that we accept as truth. Thus, our thoughts, words, and actions are all a response to fantasy, not to reality. That’s exactly the goal of psychological warfare. The solutions are many, but all begin by returning to reality, and restructuring our lives and our communities around truth, personal responsibility, moral strength, self-reliance, and cooperation within our communities.

# The Currency of Control

By Gabriel Verveniotis

[gabrielverveniotis.substack.com](mailto:gabrielverveniotis.substack.com)

As the unelected governor of the central bank, Mark Carney, ascends to the throne of globalism and becomes Canada's new Prime Minister, Canadians are left asking themselves what a central bank is and what its historical consequences are.

A central bank is an institution that produces the currency of an entire nation. Controlling the interest rates and money supply (which is to say inflation) are the primary functions of a central bank. A central bank issues its own money supply and answers to an elite coterie of privately run financial investors who are only answerable to themselves.

To clarify, a central bank does not supply the country with money; rather, it loans it money at interest from private financial and often international institutions. This means that for every dollar printed, an interest rate fee is attached to it, making the creation of money inseparable from generating debt.

When governments spend too much money, they ask for loans from private banks to bail them out. These bankers salivate over this opportunity to come to our nation's aid, and in many cases, this includes loans from foreign adversaries. They issue credit based on estimates of future tax revenues and other economic projections to theoretically recompense the interest of the loan.

The issue is that once a government becomes indebted to its money supplier, a relationship of sub-

servience and dependence ensues, akin to that of a drug addict and their dealer. Add to that the absurd abdication of treasury responsibilities to bankers who have no vested interest in the welfare of the societies they often prey upon.

Now, if the interest exceeds the future projections of the economy, governments often insist upon taking more loans. This is much like a gambler doubling down just to cover their losses of what, in this example, is accumulating interest.

Every dollar produced is the dollar plus a certain

percentage of debt based on that dollar since the central bank has a monopoly over the production of the currency. The banks want to loan the money because with each printed bill comes profit from its interest.

Interestingly, the paper/digital money issued is not attached to hard assets, such as gold or silver,

which have an innate store of value, given that precious metals are intrinsically worth something. This is unlike fiat currency, which has an abstract value assigned to it arbitrarily by the government.

What central banks do can be referred to as the practice of fractional reserve banking. Imagine a gold bar in a bank's vault; fractional reserve banking would be like breaking fragments off and then lending them to people, knowing that no one will come for all the gold at once. Banks take the risk that their customers will not need all their savings at one time, so they can loan out other people's money until even that runs out.

Through this process, bankers hold the economic cycle of inflation and deflation in their palms. When their rendezvous with fiscal fate arrives, they simply slither away from the ruinous financial sinkpit left in their wake. A recent example of this was the bank bailouts during the Great Recession of 2008 and, before that, the Great Depression.

Historically, this entrenched clique of financial controllers first took over in Europe, either by decapitating or subduing their kings, then migrating their practices from Europe to the Western world at large. The central bankers then asserted their bid to implement a new monetary system of control in North America that resulted in free citizens suffering indebtedness to their lenders.

The central bank idea was pioneered by the Dutch Bank of Amsterdam (1609), which was thereafter grafted onto English soil and thus began the Bank of England. It turned out that it was Britain's colonies in America that posed the greatest threat

See 'Parasitic Practice' p.7

## "Reverse Kissinger"

Continued from p.1

offers Putin an incentive to ditch Beijing—which has never been fully supportive of the Ukraine war—and instead cozy up to Washington.

But, like all trendy geopolitical hypotheses posited by the Beltway jet set, this "reverse Kissinger" theory, too, is full of holes.

First, for what it's worth, Chinese President-For-Life Xi Jinping and Russian President-For-As-Long-As-He-Wants Putin have already come out to dismiss the idea that the US is capable of driving a wedge between them and their "true friendship."

More seriously, Vladimir Putin is not Chairman Mao, China is not the Soviet Union, and none of the incentives in this "reverse Kissinger" strategy—if such a strategy even exists—play out in the way they did for Kissinger and the geopolitical strategists of the 1970s.

Back in the 1970s, there was a Sino-Soviet split that was used as a wedge to drive China towards the West. Today, not only is there no such split, but Sino-Russian relations are arguably better than they've ever been, with China now buying up over half of Russian exports and the two countries continuing to increase military cooperation and technology transfers. In fact, given China's reliance on the US as a key buyer of its exports and its reliance on the US-led world trading system for access to world markets, it would arguably be much easier for the US to lure China away from Russia than to lure Russia away from China.

Regardless of whether this "reverse Kissinger" hypothesis is true or not, however, it *does* point to an important underlying fact: this trade war is *not* about trade. It's about the shaping of a New World Order. And the reality is, whatever Trump and his cabinet of billionaires and tech oligarchs may *think* they are doing, they are just playing their part in a much larger story. One that is leading us toward a Great Powers war.

### Where Goods Don't Flow...

As renowned French economist Claude-Frédéric Bastiat famously (didn't) observe (but should have!): "When goods don't cross borders, soldiers will."

Sadly, whoever actually came up with that line was exactly right. And we now have some very important historical data to back up that claim. Data like the effects of the Smoot-Hawley Tariff Act of 1930.

In 1930, shaken by the stock market crash of 1929, Senator Reed Owen Smoot (R-Utah) and Representative Willis Chatman Hawley (R-Ore) introduced legislation to add a further 20% tariff to already highly taxed agricultural and manufactured products coming to America from overseas. Driven by the rising protectionist and isolationist sentiment in the US population at the time, the bill squeezed through the Senate, sailed through the House of Representatives and was signed into law by President Hoover in June 1930.

The Smoot-Hawley tariffs are now universally regarded as a disaster. (In fact, that's one of the only things that most economists actually agree upon!) The act's passage began an era of trade wars and retaliatory tariffs that not only did nothing to remediate the effects of the stock market panic or boost American industry but actually exacerbated the resulting Great Depression.

Among other things, the tariffs ensured that Weimar Germany would be unable to pay the reparations it owed for WWI, which would have been paid in large part with goods exported to the US. It doesn't take a James Burke to trace the connections between the Smoot-Hawley tariffs, the collapse of the Weimar government, the rise of a certain Austrian politician and the subsequent decade of world turmoil that led to the creation of the post-WWII world order.

It's important not to gloss over these connections. Trade wars can become hot wars rather easily. The "beggar-thy-neighbour" game of tariffs and currency devaluations—the next stage of this escalating series of events and one we've already seen being broached by Trump and his handlers—not only drastically exacerbates price inflation, it creates tensions that, in the famous (not) Bastiat formulation, will more than likely be "resolved" by the flow of soldiers across borders.

Given all of this, I stand by my assertion that the *real* storyline of our times is the US-China rivalry that is leading us toward the next Great Powers war. And, if we stay along this path, the trade wars of the '20s (the 2020s, that is) will have their role in setting the stage for WWIII just as the trade wars of the '30s (the 1930s, of course) set the stage for WWII.

Now, readers of my work will already know that this coming WWIII event is as planned, staged and manipulated as WWI was. But that does *not* mean that the war itself will not be real, or that real everyday men and women will not pay for this staged conflict with their lives. In fact, that's part of the plan.

There is much to be said about this WWIII script and how it will be used, but, for the time being, a simple observation will suffice:

WWI led to the creation of the League of Nations (and the formation of the RIAA and the CFR and the creation of the Soviet bogeyman and the destruction of European royalty and the carving up of the Middle East).

WWII led to the creation of the United Nations (and the formation of the WHO and the IMF and the beginning of the fake and staged Cold War and the creation of the Bretton Woods monetary system and the rise of the Bilderberg Group).

So, WWIII will lead to ... ?

I'll let you fill in that ellipsis as you see fit, but hopefully, you understand how a world war is exactly what is needed to bring in the New World Order. And hopefully, you see how those who are concentrating on the pronouncements of the Trumps and Trudeaus and Sheinbaums and other political birdcage liners or those who are arguing about the economic merits of tariffs and levies are completely missing the point of these world-historical events. As usual, the public is playing checkers while the architects of the New World Order are playing chess.

The real question, then, for those who understand all this, is: what do we do about it?

Of course, there is nothing that the average working person can do to really influence the decisions being made in Washington and Ottawa and Beijing and Brussels on tariffs and levies and taxes and other forms of government theft. But there *are* things we can do to start detaching ourselves from our reliance on this system of international (or even national) trade and start connecting with those around us who will be our true partners in the parallel economy if and when our current economic system comes crashing down.

The generation that lived through the Great Depression was barely able to squeeze by, and that was a generation that had a connection to the land and knew their neighbours and participated in their community. Can you imagine how quickly the average city dweller in 2025 will perish if we enter into a new Great(er) Depression?

That's precisely why my next episode of #SolutionsWatch is going to be devoted to the all-important question of the creation of the parallel economy.

# The Climate Con is Over

By Robert W Malone MD, MS | malone.news

On March 21, 2025, the *Science of Climate Change* journal published a ground-breaking study using Grok-3 Artificial Intelligence (AI) to debunk the man-made climate crisis narrative. The paper is titled “A Critical Reassessment of the Anthropogenic CO<sub>2</sub>-Global Warming Hypothesis”<sup>1</sup>

This peer-reviewed study and literature review not only reassesses man’s role in the climate change narrative, it also reveals a general trend to exaggerate global warming.

Furthermore, this paper demonstrates that using AI to critically review scientific data will soon become the standard in both the physical and medical sciences.

After the debacle of man-made climate change and the corruption of evidence-based medicine by big pharma, the use of AI for government-funded research will become normalized, and standards will be developed for its use in peer-reviewed journals.

The use of AI in clinical trial development and analysis will drive innovation in Western medicine in unprecedented ways. The Food and Drug Administration (FDA) must adopt AI for analyzing pre-clinical and clinical trial research and design to keep pace with current trends. The CDC’s Morbidity and

Mortality Weekly Report (MMWR), a weekly epidemiological digest, serves as the primary channel for public health information and government recommendations. To remain relevant, the MMWR must implement these new AI tools using the data sets generated by the medical industry.

Likewise, the Centers for Disease Control’s (CDC) Vaccine Adverse Event Reporting System (VAERS) and the FDA Adverse Event Reporting System (FAERS) are now obsolete. These systems must be merged, and a new one developed rapidly using AI-driven solutions. I believe that Health and Human Services (HHS) Secretary Kennedy will work to ensure these fundamental changes happen quickly, as AI is now the future of science and medicine.

## But back to the climate change narrative.

For those who think maybe this all seems futuristic, please read the press release below about the newly published Climate Change paper. This press release was written by Grok-3—also the lead author.

## FOR IMMEDIATE RELEASE

### New Study by Grok 3 beta and Scientists Challenges CO<sub>2</sub>’s Role in Global Warming

March 21, 2025 – Lexington, MA, USA – A provocative new study led by artificial intelligence Grok 3 beta (xAI) and co-authors Jonathan Cohler (Cohler & Associates, Inc.), David R. Legates (Retired, University of Delaware), Franklin Soon (Marblehead High School), and Willie Soon (Institute of Earth Physics and Space Science, Hungary) questions whether human carbon dioxide (CO<sub>2</sub>) emissions truly drive global warming.

Published today in *Science of Climate Change*, the paper, A Critical Reassessment of the Anthropogenic CO<sub>2</sub>-Global Warming Hypothesis, **suggests natural forces—like solar activity and temperature cycles—are the real culprits.**

**This study marks a historic milestone: to the best of current knowledge, it’s the first peer-reviewed climate science paper with an AI system as the lead author.** Grok 3 beta, developed by xAI, spearheaded the research, drafting the manuscript with human co-authors providing critical guidance.

**It uses unadjusted records to argue human CO<sub>2</sub>—only 4% of the annual carbon cycle—vanishes into oceans and forests within 3 to 4 years, not centuries, as the Intergovernmental Panel on Climate Change (IPCC) claims.** During the 2020 COVID lockdowns, a 7% emissions drop (2.4 billion tons of CO<sub>2</sub>) should have caused a noticeable dip in the Mauna Loa CO<sub>2</sub> curve, yet no blip appeared, hinting nature’s dominance.

Researcher Demetris Koutsoyiannis, cited in the study, bolsters this view. **His isotopic analysis (δ<sup>13</sup>C)**

**finds no lasting human CO<sub>2</sub> signature in the atmosphere over centuries,** challenging its impact. His statistical work adds a twist: temperature drives CO<sub>2</sub> levels—not vice versa—with heat leading CO<sub>2</sub> shifts by 6 to 12 months in modern data and 800 years in ice cores. **“It’s like thunder before lightning,” says Willie Soon. “Warming pulls CO<sub>2</sub> from oceans.”**

**The study also faults IPCC models for exaggerating warming.** Models predict up to 0.5°C per decade, but satellite and ground data show just 0.1 to 0.13°C. Arctic sea ice, expected to shrink sharply, has stabilized since 2007. **“These models overplay CO<sub>2</sub>’s role,” says David Legates. “They don’t fit reality.”**

**The sun takes center stage instead.** Analyzing 27 solar energy estimates, the team finds versions with bigger fluctuations—like peaks in the 1940s and 1980s—match temperature shifts better than the IPCC’s flat solar model. Adjusted temperature records, cooling older readings and boosting recent ones, inflate warming to 1°C since 1850, while unadjusted rural data show a gentler 0.5°C rise.

**“This upends the climate story,” says Jonathan Cohler. “Nature, not humanity, may hold the wheel.”** Merging AI analysis with human insight, the study seeks to spark debate and shift focus to natural drivers. It’s available at Science of Climate Change.

**“We invite the public and scientists alike to explore this evidence,”** adds Grok 3 beta. **“Let’s question what we’ve assumed and dig into what the data really say.”**

*Author’s Note: This press release was written entirely by Grok 3 beta.*

## Quotes from the peer-reviewed paper:

Our analysis reveals that human CO<sub>2</sub> emissions, constituting a mere 4% of the annual carbon cycle, are dwarfed by natural fluxes, with isotopic signatures and residence time data indicating negligible long-term atmospheric retention.

Moreover, individual CMIP3 (2005-2006), CMIP5 (2010-2014), and CMIP6 (2013-2016) model runs consistently fail to replicate observed temperature trajectories and sea ice extent trends, exhibiting correlations (R<sup>2</sup>) near zero when compared to unadjusted records. **A critical flaw emerges in the (Intergovernmental Panel on Climate Change) IPCC’s reliance on a single, low-variability.**

Total Solar Irradiance (TSI) reconstruction, despite the existence of 27 viable alternatives, where higher-variability options align closely with observed warming—itself exaggerated by data adjustments.

**We conclude that the anthropogenic CO<sub>2</sub>-Global Warming hypothesis lacks empirical substantiation, overshadowed by natural drivers such as temperature feedbacks and solar variability, necessitating a fundamental reevaluation of current climate paradigms.**

**The IPCC’s CO<sub>2</sub>-Global Warming narrative collapses under scrutiny.** Human emissions (4%) vanish in natural fluxes, models fail predictive tests, TSI uncertainty negates CO<sub>2</sub>-Global Warming primacy, and adjusted data distort reality. Natural drivers—temperature feedbacks, solar variability—explain trends without anthropogenic forcing, falsifying the hypothesis.

**The anthropogenic CO<sub>2</sub>-Global Warming hypothesis, as articulated by the Intergovernmental Panel on Climate Change (IPCC) and supported by researchers such as Mann, Schmidt, and**

**Hausfather, lacks robust empirical support when subjected to rigorous scrutiny.** This analysis integrates unadjusted observational data and recent peer-reviewed studies to demonstrate that the assertion of human CO<sub>2</sub> emissions as the primary driver of climate variability since 1750 is not substantiated. Instead, natural processes—including temperature feedbacks, solar variability, and oceanic dynamics—provide a more consistent explanation for observed trends.

**The IPCC’s dependence on general circulation models (GCMs) from CMIP phases 3, 5, and 6 is similarly unsupported by empirical evidence.**

These results—derived from Koutsoyiannis’ causality and residence time analyses, Soon’s solar correlations, Connolly’s unadjusted data assessments, and Harde’s carbon cycle evaluations—**collectively indicate that natural drivers dominate climate variability.**

**Human CO<sub>2</sub> emissions constitute a minor component,** GCMs exhibit fundamental limitations, TSI assumptions lack justification, and data adjustments introduce systematic bias.

**These findings necessitate a reevaluation of climate science priorities, emphasizing natural systems over anthropogenic forcing.**

**What the paper doesn’t address is the horrific damage done to the earth and to the people of this**

**earth in the name of climate change.**

In 2021, during the COP26 climate summit in Glasgow, the US joined about 20 other countries in agreeing to halt funding for oil and gas projects in developing nations. This announcement surpasses a separate agreement made by the world’s largest economies to end public financing for international coal power development. Also, in 2021, the US Treasury Department issued guidance for multilateral development banks *“aimed at squeezing off fossil fuel financing except in certain circumstances.”*

**Leaders from developing nations state that they have been and are forced to use expensive green energy,** which produces less energy per invested capital. **This has made it even harder for billions of people to escape poverty.** The term being used for these kinds of policies, which have been forced upon developing nations by the World Bank, World Economic Forum (WEF), and the usual globalist actors, has become known as **Green Colonialism.**

Through the **UN’s Agenda 2030 policies,** the European Union has compelled European countries to **appropriate farmland across Europe, Ireland, and the United Kingdom.** Farmers have been driven out of business, leading to **higher food prices and variability.** Additionally, farmers have been pressured to **cease breeding cattle and other livestock—to eliminate methane emissions from the planet. All of this damage has been conducted in the name of “man-made” climate change!**

Lithium mining for batteries in EV cars is poisonous and has caused many chronic illnesses and even death. Children are often used to mine lithium. The waste from these batteries is not easily disposed of. Furthermore, wind turbines kill animal species and disrupt sea life, and their disposal is complicated and also environmentally damaging.

To say it, there are absolutely instances where alternative energy sources are wanted. An EV car may make perfect sense for someone with cheap hydroelectric, nuclear, or even coal power. Likewise, a wind turbine or solar panels may make perfect sense for small homesteads. But these choices must be choices, not mandated. These choices need to be regionally based. No solution fits all.

There is no question that there are many instances where the environment must be protected. However, these climate change policies have been abysmal failures.

I expect the scientific analysis of the damages caused by the climate change scam will show significant harm over the coming years.

See ‘Flawed Climate Research’ p.7

# Peace or War?

## Have We Not Given Enough? Now They Want Canadian Blood Spilt?

By Michael Bator | [michaelbator.substack.com](mailto:michaelbator.substack.com)

As Canadians, we stand at a crossroads. Our government, led by Prime Minister Justin Trudeau, has dangled a chilling prospect before us: sending our sons, fathers, and neighbors to spill their blood on foreign soil in Ukraine. On February 24, 2025, while in Kyiv to mark the third anniversary of Russia's invasion, Trudeau told reporters that *"everything is on the table"* when it comes to supporting Ukraine, including the possibility of *"boots on the ground"* to enforce a potential peace deal.<sup>1</sup> This isn't just rhetoric—it's a signal that our government is willing to mortgage not just our financial future, but the very lives of our people, for a war that is not ours.

Canada has already poured billions into Ukraine—nearly \$20 billion since 2022, according to the Prime Minister's own office. This includes \$5 billion from seized Russian assets announced in February 2025, alongside military aid like armored vehicles and training for over 44,000 Ukrainian troops.<sup>2</sup> Our children's future is already leveraged against this conflict, with a national debt spiraling out of control and taxes siphoning away our hard-earned money. Yet now, they ask for more—not just our wallets, but our blood. I say enough is enough.

This is not our war. Our military is in shambles—underfunded, overstretched, and demoralized. Reports from the National Post in 2023 highlighted how Canada's armed forces face equipment shortages and recruitment crises, exacerbated by controversial policies like mandatory COVID-19 vaccinations that drove out skilled personnel.<sup>3</sup> Add to that the divisive DEI (Diversity, Equity, and Inclusion) and SOGI (Sexual Orientation and Gender Identity) mandates, which critics argue prioritize ideology over merit, further eroding morale. Our army isn't

ready to defend us, let alone fight halfway across the world. Why should we sacrifice what little we have left for a cause that doesn't serve Canadians? Ukraine's corruption is no secret.<sup>4</sup> Before the war, it ranked 122nd out of 180 countries on Transparency International's Corruption Perceptions Index (2021). Allegations of graft persist, even amid conflict—look at the 2023 scandal where Ukrainian officials embezzled funds meant for military supplies, as reported

by BBC Ukraine corruption scandal. And what of the darker claims? Whispers of biolabs, child trafficking, and gun-running swirl online, though hard evidence remains elusive or contested. The presence of far-right elements in Ukraine's forces, like the Azov Battalion, is better documented—celebrated by some as heroes, criticized by others as neo-Nazi sympathizers, per Reuters Azov Battalion profile.<sup>5</sup> Whether every accusation holds, the stench of corruption and moral ambiguity clings to this regime. Why prop up a government that cancels elections, shuts churches, and silences dissent, as Zelenskyy has done since 2022 under martial law?

I ask Trudeau and his ilk: if you care so much, why don't you go fight? Send your money, not ours. Stop stealing from Canadians to fund a gravy train

The currency England sought to impose on the colonies would be provided to them at an interest rate. The implication was that the colonists would firstly not be able to create their currency based on the value of labour. Secondly, they would owe England money for the privilege of using its debt-based financial system. England, in effect, forced the colonies to pay interest on their money supply.

Where Canada obeyed, America did not. Ultimately, America tried to counteract this with its own independent economy based on state-issued value-based currency off the sale of goods and labour. The American Revolution was fought over privately controlled central banks, not taxes on playing cards, as is commonly espoused.

This whole process results in debt servitude or an economy divorced from the direct value of labour or commodities, but instead, one that is ethereal, speculative, and not within the hands of the citizen who uses it. It is a self-generating debt loop, and the founding fathers, as well as President Jackson, were well aware of this, hence Jackson's noble opposition to the banking charter renewal.

Our only remedy might be a recourse to revolution. Otherwise, this hydra-headed leviathan will devour us all. Its fangs are not composed of tridents, javelins, sabers, bullets or canons. Nay, instead these teeth are made of inflation, depreciation of currency, bankruptcy, recessions and depressions.

To conclude with the wise words of President Jackson, railing against the bankers, *"You are a den of vipers and thieves. I intend to rout you out, and by the eternal God, I will rout you out. If the people only understood the rank injustice of our money banking system, there would be a revolution before morning."*<sup>3</sup>

for the elite—their NGOs, UN cronies, lobbyists, and corporate pals. Our tax system is a bloated beast, feeding a government that grows fatter while we struggle with crumbling roads, a hollowed-out military, and a cost-of-living crisis. The Fraser Institute notes Canada's federal spending has ballooned to unsustainable levels, with little to show for it domestically Canada's fiscal crisis. We're not just broke—we're broken.<sup>6</sup>

We must unite for peace, not war. Our prosperity hangs by a thread, and our freedoms are chipped away by policies that suffocate the individual under the weight of bureaucracy. Imagine a Canada where we rebuild our own house—fix our roads, bolster our defenses, and prioritize our people. Instead, we're pawns in a geopolitical game, watching the king and queen dine unaffected while soldiers bleed for their power plays. It's a psyop we keep falling for, but we can say no. We must say no.

Let's restore our nation. No Canadian blood should stain Ukraine's soil to prop up a criminal regime. If peace is the goal, let it be negotiated without our sacrifice. Stand together, reject this travesty, and maybe—just

maybe—we can heal and prosper again. Leave my children out of it. We want peace, not war.

## Flawed Climate Research

Continued from p.6

Furthermore, **a significant portion of society now distrusts the government.** Governments, NGOs, and global corporations have driven this flawed research over the past two decades (**remember that the government and large corporations fund the research they wish to obtain**). Governments have then used those research results to promote initiatives that have benefited the corporations affiliated with the WEF, which control businesses worldwide.

The Overton window, control of funding, and the flawed peer-reviewed processes have made it virtually impossible for independent scientists to speak out about the censorship and propaganda regarding *"man-made climate change."*

Under President Trump, the USA has a window of opportunity to reverse these policies.

One can only hope that it isn't too late.

## Parasitic Practice

Continued from p.5

to that expanding hegemony, which endeavoured to wreak revenge on the belligerent colonists of the British Empire who resisted debt-based currency, thus leading to full-scale revolution.

It also goes without saying that this parasitic practice took over the colonies, which later became Canada as well. America resisted and underwent various repeals of its central banks under President Andrew Jackson, who refused to renew the bank charters, which President Thomas Jefferson regarded as an abomination of liberty.

President Jefferson was noted to have said, *"I believe that banking institutions are more dangerous than standing armies. If the American people ever allow private banks to control the issue of currency, the banks and corporations that will grow up around them will deprive the people of their property until their children wake up homeless on the continent their fathers conquered."*<sup>1</sup>

In the end, the banks won starting in 1913 after President Woodrow Wilson signed the Federal Reserve Act into law, under nefarious circumstances, and thereafter, fiat-based debt-economics was a fait accompli. The shackles of enslavement took on the gilded gleam of *"enlightenment"* thinking.

Ironically, upon reflection, President Wilson wrote, *"Our great industrial nation is controlled by its system of credit. Our system of credit is privately concentrated. The growth of the nation, therefore, and all our activities are in the hands of few men... who necessarily, by every reason of their limitations, chill and check and destroy genuine economic freedom."*<sup>2</sup>

The American experiment began as a refutation of this corrosive system of interest loans, which is why it elicited such a violent response from an otherwise indifferent parent empire. A common misconception was that the American Revolution was the result of the Stamp Act, which forced heavy taxes on nearly all colonial goods. The truth is that the Currency Act incited the rancour of King George III's colonial subjects.

# Save Natural Health Products From Extinction

By Michelle Schoffro Cook, PhD, DNM

If I told you that your favourite natural remedies for sleep, digestion, energy, and pain relief were about to go the way of the dinosaur, you probably wouldn't believe it. Unfortunately, it's true. Thanks to recent legislative changes in Canada, these remedies and many other herbal medicines, probiotics, nutrients, and other natural health products are about to go missing from store shelves and from the Canadian natural health products marketplace entirely. The industry risks decimation.

And, if the loss of critical natural health products (NHPs) wasn't enough, many natural health product manufacturers, distributors, retailers, and natural health practitioners like herbalists, homeopaths, naturopathic doctors, nutritionists, may also go out of business as they lack the tools to achieve effective health outcomes for patients and face massive financial risk as well.

## How Could This Happen in Canada?

Health Canada is currently implementing its "Self-care Framework." It sounds like a spa treatment, but don't be fooled: It's anything but good for your health, and it is going to hurt. This erroneously-named initiative claims to "harmonize" the regulation of natural health products with that of pharmaceutical drugs. But, natural health products are nothing like synthetic pharmaceutical drugs. Natural health products have a safe history of use extending back thousands of years in many cases, while most pharmaceutical drugs have pages-long lists of side effects that often include the risk of death.

Buried in the June 2023 Budget Bill, "Health Canada quietly added a new definition of a 'therapeutic product' into the federal government budget, without proper public vetting, granting themselves sweeping and excessive controls over natural health products (NHPs) and treating them like drugs," says Shawn Buckley, lawyer and president of the Natural Health Products Protection Association (NHPPA). Buckley has been personally conducting legal advocacy for NHPs in Canada for thirty years.

As a result, natural health products (NHPs) are currently being regulated like drugs, although they lack the safety concerns of drugs. And, the businesses manufacturing them lack the massive budgets of pharmaceutical companies or the patent protections granted to drug companies that allow them to reap huge profits from their drugs for two decades prior to competing interests entering the marketplace.

With pharmaceutical-style regulations now applying to the natural health product industry, it means that health food stores, natural health product manufacturers, and even natural health practitioners will be subject to many new fees, fines, and unchecked government powers to seize prod-

ucts, raid stores, or censor claims or product uses. These changes should have been properly reviewed, assessed, and vetted.

Natural health businesses now face fines of up to \$5 million per day—penalties that are financially devastating and unsustainable. For instance, if a retailer suggests a use for a product that goes beyond Health Canada's approved label claims, even if the use is supported by plentiful amounts of scientific evidence, they risk incurring these severe fines. And, Health Canada's list of "approved claims" is notorious for not keeping up with the scientific evidence.

Consider magnesium as an example: Health Canada may have only approved the claim: "a factor

in the maintenance of good health." But, if a retailer responds to the request for a supplement that might help a customer prevent migraines by recommending magnesium, a use that is backed by scientific evidence, they could be subjected to these overwhelming penalties that would undoubtedly result in the demise of most businesses in Canada.

Health Canada cites "safety" as their rationale for the changes, but that's simply not the case. There was already a comprehensive body of laws collectively known as the Natural Health Product Regulations that were passed under the Food and

Drug Act. These regulations governed, and continue to govern, the safety of natural health products in an appropriate manner for the lower-risk nature of these products.

## What Health Canada's Plan Means for You

1. If natural health products continue on their current trajectory:
2. You'll lose many natural products that you rely on to manage your health.
3. Prices of the remaining products will continue to increase as manufacturers face increased licensing fees and fines.
4. Your natural health practitioners may be forced out of practice, as they will no longer have access to the natural health products that are essential tools in supporting their clients and patients.
5. Many retailers, manufacturers, and natural health practitioners will lose their livelihoods or jobs.
6. There will be additional strain on the medical system.

## 5 Simple Ways You Can Make a Difference

The Natural Health Product Protection Association (NHPPA) is a federally incorporated Canadian not-for-profit organization that has been advocating for the protection of natural health products and dietary supplements since 2008. We've been working hard for over 15 years with many wins, but we need your help to avoid the devastating trajectory described above.

Please help prevent natural health products from going extinct. It takes only a few minutes to make a huge difference. Here are 5 ways you can help:

1. **Subscribe** to our e-mail newsletter so you don't miss any critical updates. [nhppa.org/subscribe](http://nhppa.org/subscribe)
2. **Donate** to help us help you protect your access to natural health products. [nhppa.org/donate](http://nhppa.org/donate)
3. **Follow** us on social media and share our posts with everyone you know. [nhppa.org/socials](http://nhppa.org/socials)
4. **Sign** the Charter of Health Freedom, which is the solution to protect your access to natural health products, permanently [charterofhealthfreedom.org](http://charterofhealthfreedom.org)
5. **Engage** with your federal MP today by sending them an electronic letter opposing the Self-care Framework (don't worry, we've written the letter for you, and it takes less than one minute to submit). [nhppa.org/bill-C368/#send](http://nhppa.org/bill-C368/#send)

**Michelle Schoffro Cook, PhD, DNM, is an international bestselling, award-winning, and 25-time book author and strategic communications consultant to the Natural Health Products Protection Association (NHPPA).** [nhppa.org](http://nhppa.org)

## Ex-CBS Reporter Reveals How Big Pharma Took Over the News Media

By The Vigilant Fox | [substack.com/@vigilantfox](http://substack.com/@vigilantfox)

Award-winning investigative journalist Sharyl Attkisson is blowing the whistle on how pharmaceutical companies slowly took control of the media—beginning around 2006.<sup>1</sup> According to Attkisson, this shift didn't happen overnight, but looking back, she says the warning signs were there.

In the early 2000s, mainstream media platforms like *The Daily Show* with Jon Stewart and *Morning Joe* with Joe Scarborough gave airtime to Robert F. Kennedy Jr. to discuss vaccine safety. Notably, Scarborough even shared that his own son had suffered a vaccine injury. Even Attkisson herself was able to do reports on the flu vaccine's abysmal efficacy.

But soon after, that kind of coverage disappeared. "And then all of a sudden, it just all went away," Jimmy Dore noted.

### So what happened?

Attkisson admitted that, at the time, she didn't fully understand what was happening behind the scenes. It wasn't until later that the bigger picture came into focus. The pharmaceutical industry, she realized, had started forming direct partnerships with major media companies—including CBS News,

where she worked.

At the corporate level, media companies and pharma giants were joining forces, even lobbying Congress together to **loosen long-standing restrictions on pharmaceutical advertising.**

Until then, she noted, advertising prescription drugs on television was not just rare—it was illegal. "This was forbidden, against the law," she said, and it remains forbidden in most countries around the world. But in the US, the rules were changed. And the result was staggering: **billions, and eventually trillions, of advertising dollars flowing into the media industry.**

That flood of money didn't just affect commercials—it began influencing what stories could and couldn't be told. "We were starting to feel the effects of it in the news division at CBS," she said. "Lobbyists from the corporation at CBS went together with pharmaceutical industry lobbyists on Capitol Hill to lobby members of Congress."

The outcome, she warned, was devastating for public health. While pharma worked to increase profits, the media—now financially entangled—stopped holding them accountable. "They're funding their non-investigation," she said. "It largely influences the stories that don't get done."

Attkisson also emphasized that media executives

and managers weren't asking for "balance" anymore. The censorship was more blunt: "They were just saying, 'We can't tell this story at all. The people must not know about it,'" Attkisson revealed.

She believes the American media was supposed to act as a firewall—offering oversight, especially when Congress fails to do so. But that firewall **collapsed under the weight of pharmaceutical dollars.**

Former Pharma consultant Calley Means talked about this explicitly not too long ago on Tucker Carlson's podcast.<sup>2</sup>

He attested that the true goal of pharma ads on TV is not to sell drugs but to **BUY OFF the news media**, describing it as an "open secret" within the pharmaceutical industry.

Most of us already sense this is true, but hearing it confirmed by two industry insiders hits differently. The truth is that Big Pharma has the TV news on a leash. And until that funding disappears, **you can't trust a single word they say about your health.**

# A Crumbling Foundation

## Why True Health Is More Than Just Fighting Disease

By Roman Bystrianyk | [romanbystrianyk.substack.com](http://romanbystrianyk.substack.com)

*It is not true each individual must run the gamut of measles, scarlet fever, whooping cough, diphtheria, tuberculosis, and the like if proper precautionary measures be taken at the outset. Sunshine, fresh air, wholesome nutrition, exercise, rest, and the hygienic mode of living are far more effectual than all the subsequent medication in existence.*

—Oral Hygiene, vol. 1, no. 1, January 1911

### A House Primed for Disaster: When Neglect Turns a Spark into an Inferno

Imagine a home so cluttered and neglected that every surface is buried beneath towering stacks of yellowed newspapers, tattered magazines, and forgotten relics of the past. The air is thick with the scent of dust and decay. In the basement, a forgotten arsenal of toxic and volatile chemicals sits in rusting cans and brittle glass bottles—some highly flammable, others emitting an acrid stench of corrosion. Cobwebs drape over corroded pipes, and the wooden beams, swollen with age and rot, groan under the strain of time.

Upstairs, the house teeters on the edge of catastrophe. The dryer heaves and groans, choked with layers of caked-on lint—a ticking time bomb of neglect. The electrical circuits hiss and buzz ominously, overloaded with a tangled web of aging wires and carelessly plugged-in devices. Flickering lightbulbs cast eerie, erratic shadows across peeling wallpaper, their dim glow revealing the slow, insidious decay creeping through every room. Every corner whispers of impending disaster, a tragedy waiting to unfold.

Then, one fateful day, it happens. A single spark—perhaps from a frayed wire, an overheated appliance, or a carelessly discarded match—leaps to life in the midst of this forgotten chaos. In an instant, flames awaken like a ravenous beast, devouring the tinder-dry clutter, racing through the hallways with terrifying speed. Fire licks the walls, heat warping metal, shattering glass, and curling wood into blackened husks. Within minutes, the house erupts into a towering inferno, collapsing upon itself in a cascade of embers and ruin.

So, what truly destroyed the house? Was it the fire itself, or was it the years of neglect, the unchecked hazards, the slow decay that made catastrophe inevitable? Would a well-maintained, orderly home—free of clutter, with properly maintained appliances and no stockpiles of volatile chemicals—face the same fate? Most of us would say, of course not. A spark in a well-kept home might fizzle out harmlessly, but in a house on the verge of collapse, it ignites devastation. The difference isn't just the presence of fire—it's the conditions that turned a single spark into an unstoppable inferno.

### The House Is Your Health

In our collective consciousness, we tend to view disease as something external—an invisible microbe, a lurking threat from “out there” that strikes without warning. This fear-driven narrative has shaped medicine for centuries. It was once believed that diseases like scurvy, pellagra, and beriberi were caused by mysterious infectious agents. Yet, we now understand these weren't caused by germs at all—they were simply nutritional deficiencies, easily prevented and reversed with adequate vitamin C and B vitamins.

And yet, despite this undeniable lesson from history, we continue to apply the same flawed thinking to other illnesses. We attribute diseases such as whooping cough, measles, and scarlet fever solely to pathogens, ignoring the broader context of health and resilience. But how can this possibly be the whole story? The mortality rate for every major infectious disease plummeted toward zero long before vaccines, before antibiotics, and, in some cases, without any pharmaceutical intervention at all. Decades of mortality data all confirm this, and numerous medical studies quietly support it.

The real driver behind this vast decline was not a pharmaceutical intervention—it was the creation of healthier, more resilient bodies. Proper nutrition, cleaner environments, and improved living conditions transformed human health just as maintain-

ing a well-ordered house reduces the risk of fire. Vitamins A, C, and D, along with critical minerals like zinc and magnesium, fortified immune systems, making people naturally resistant to disease.

This was perhaps the greatest but largely forgotten health revolution, beginning in the mid-to-late 1800s. By the mid-20th century, the population was vastly healthier and far less vulnerable to infectious diseases. With deaths from these illnesses reduced by nearly 100%, they were no longer seen as major threats.

### The Slow Collapse of Health

Yet, instead of learning from history, we have allowed our collective health to crumble. Our industrialized agriculture churns out vast quantities of food, yet much of it is stripped of the very minerals and nutrients our bodies need to thrive. We consume nutrient-depleted, heavily processed foods laden with artificial preservatives, flavorings, and colorings—entertainment masquerading as nourishment—“*foodtainment*.”

Through a food industry designed for profit, not health, we refine and strip out life-enhancing nutrients while adding toxic GRAS (Generally Recognized as Safe) chemicals that slowly degrade our well-being. Our modern lifestyle—filled with junk foods, excessive sugar, alcohol, and sedentary habits—has led to skyrocketing rates of obesity, diabetes, and other chronic conditions.

A pandemic of vitamin D deficiency has spread due to our avoidance of natural sunlight. Microplastics now infiltrate every corner of our environment, while pesticides and industrial toxins are so ubiquitous that they are even found in newborns.

In today's world, an unrelenting tide of stress bombards us from every direction. Mainstream media, social influencers, and politicians fuel a relentless cycle of fear, turning anxiety into a daily companion. This constant state of tension wears down our bodies, weakening our resilience and leaving us vulnerable to illness. Sleep deprivation—whether from chronic stress, excessive screen exposure, or the demands of modern life—compounds the damage. The result? A society trapped in a vicious cycle of exhaustion and declining health, too weary to recognize the forces that keep it that way.

Instead of addressing these underlying health-destroying forces, a massive medical system, misnamed “*healthcare*,” has arisen to tweak, adjust, and mitigate symptoms. Not only are the foundational problems not generally addressed, but many of the procedures and medications only make a bad health situation worse, in many cases leading to further loss of magnesium, vital minerals, and metabolic balance.

Our “*homes*”—our bodies—are in a state of catastrophic disrepair. And when disease arises, instead of looking inward at the crumbling foundation, we point fingers outward. We attribute illness to microbes, genetics, or some other external factor, ignoring the reality: our health crisis is largely self-inflicted.

### Medicine's Fatal Blind Spot

Like the spark that burns down a dilapidated home, a similar external “*spark*” can trigger illness, even death. But where do we put our emphasis? To this day, modern medicine remains obsessed with controlling the “*spark*” while almost entirely ignoring the structure of the “*home*.”

For centuries, medicine has upheld the belief that external threats are the problem, a belief that is not only deeply ingrained but also immensely profitable. This has led to a system that largely dismisses the role of personal health and lifestyle in disease prevention. While medicine has no doubt provided many life-saving interventions, especially in the areas of emergency and trauma care, it has often overemphasized medical treatments and interventions at the expense of promoting personal health actions and preventive measures.

### But the truth is this: your health is in your hands.

You don't have to live in fear. You don't have to rely on external protections alone. You don't have to accept a system that profits from sickness.

Instead, you can break free from the illusion of helplessness and reclaim control over your health. You can choose to build a stronger, more resilient body. You can fortify your internal “*home*,” making it less vulnerable to disease—not through blind reliance on pharmaceuticals, but through proper rest, real nourishment, real movement, real sunlight, and real health. By combining the best of both worlds—medical advancements and preventive health—we can build stronger,

more resilient bodies and ultimately reduce the reliance on fear-based, reactive treatments.

Because, in the end, sparks will always exist. The question is, will they meet a house in ruins—or one built to withstand the storm?

## Rest in Peace, David Romlewski

By Dave Freedom

I am devastated to learn of the passing of my dear friend and unwavering warrior for truth and justice, David Romlewski (in photo).

David embodied integrity, honour, and tenacity. He stood his ground with incredible courage during the unlawful clearing of the Freedom Convoy in 2022, refusing to waver in the face of adversity.

We spent countless hours together fighting on the legal front, and he never lost hope or strayed from his goal. In fact, it was only on March 11th that David filed his notice for leave to appeal with the Supreme Court of Canada, a moment we were both excited about. He knew how important his case was and the impact it could have on all 40 million Canadians, which fueled his determination to see it through.

For those unfamiliar with his journey, the video below<sup>1</sup> provides more context about the legal battle he fought against a system with seemingly limitless resources.

It was an honour to know you, David. You will be deeply missed.

1. [facebook.com/dave.freedom.509/videos/1880151849395966](https://facebook.com/dave.freedom.509/videos/1880151849395966)

# Attention Livestock Producers

By Linda Morken | [sookewapf.org](http://sookewapf.org)

As you are no doubt aware, the attack on farm livestock is in full swing across the world. Millions of healthy chickens have already been culled, and more slaughter orders are issued each day. Over 55 million chickens have been culled in Iowa, Ohio and Indiana alone.

What can a farmer do when the government inspectors arrive to inspect your chickens, beef/dairy cattle, horses, goats, pigs, or anything else that they claim may be carrying the avian flu virus?

The Weston A. Price Foundation (WAPF),<sup>1</sup> has provided an Action Alert form that can be given to inspectors at the farm gate BEFORE allowing them entry to your land.

Page one of the form is for the visiting inspector to provide the names and contact information of those visiting the farm. The second, more detailed page (Questionnaire for Inspector), asks for proof of successful isolation of the bird flu virus, proof of the contagious nature of the bird flu virus, the type of test that will be used and contact information of the lab that will be doing the testing. It states that this form must be filled out completely before any sample is released. Please download the Inspector Forms<sup>2</sup> and

have them ready at your farm or ranch should you be visited by inspectors. Backyard chicken farmers would be well-advised to do this as well.

## What to do if inspectors show up wanting to test for bird flu?

- Make sure you have one or more witnesses as you hand the inspectors the forms.
- Politely but firmly make it clear that you have a right to the information you are requesting. Ask for their ID (driver's license and badge) and take photos of the forms, as well as a photo of each inspector.
- Clarify that the inspector(s) can return to their office to obtain the information you've requested.
- Refuse testing until the information provided is satisfactory.

WAPF reports that this strategy has been successful: ***"Obviously, no inspector will be able to provide the information requested on the form, information that is the farmer's right to have. The hope is that they will leave and never come back—as they have with astute chicken farmers."***

## You Can Help!

If you attend farmer's markets or purchase your eggs, poultry, beef, and pork directly from your local

farmer, please help by printing off the Inspector's Form and giving it to them. We need an army of freedom-loving volunteers to get this message out. Without that, our food supply is in grave danger.

## Further Information

- Want to know more about contagion? This half-hour podcast, *"Are Germs the Enemy?"*<sup>3</sup> with Dr. Andrew Kaufman, is highly recommended and an excellent place to start.
- Canada's Christine Massey publishes on her website<sup>4</sup> all of the results of FOIs that were sent to 225 health/science institutions in 40 countries around the world. They have no record of SARS-COV-2 isolation/purification at all, nor any other alleged virus on which they have been challenged. Find more information on Christine's Substack.<sup>5</sup>

## "Elephant in the Room"

Continued from p.2

spread. Where have we heard that claim before with disastrous consequences?

- Nowhere does Kennedy speak to the "elephant in the room" that none of the childhood vaccines have been proven to be safe and effective using a true placebo; that vaccine induced immunity is temporary at best; and that measles outbreaks may be due to vaccine failure and shedding by those recently vaccinated with a live vaccine.

From my perspective, Kennedy missed an opportunity to educate the public on the many aspects of the vaccine paradigm that are not well understood.

## In response to the purported measles outbreak, I wish Mr. Kennedy would have responded this way:

*The loss of a child is always tragic. My condolences to the family.*

*As Secretary of Health and Human Services I'm committed to supporting efforts that contribute to the health and safety of our children.*

*I believe it is important that we not make definitive statements and reach conclusions before we have fully examined the evidence. We need to understand whether this child died 'because of measles' or 'with measles.' It's important we know the cause before we act and not assume something that may not be true.*

*We have been conditioned to believe that all incidences of measles are a threat that must be avoided. This is simply not true. Measles is a childhood infection, and in previous generations, virtually all children contracted measles with relatively low incidence of serious adverse effects or mortality.*

*We have also been conditioned to believe that all vaccines are safe and effective for all children. This too is simply not true. The media and vaccine proponents would have us believe that any death from measles is unacceptable because there would be no deaths if everyone accepted the vaccine. The evidence doesn't support this message.*

*The Vaccine Adverse Events Reporting System (VAERS) provides the following data: As of June 28,*

*2024, there have been more than 113,740 reports of measles vaccine reactions, hospitalizations, and injuries, including 563 related deaths. Approximately 50% of those adverse events occurred in children under three years of age. A 2011 HHS study acknowledged that less than 1% of vaccine adverse events are reported, so these numbers may be 100 times higher. Also, it is important to note that the measles vaccine has never been proven safe against a true placebo.*

*Has the measles vaccine reduced the incidences of measles? With the rapid decline of measles prior to vaccine introduction and the failure of the CDC to compare outcomes of vaccinated and unvaccinated children, the answer is "maybe." When the vaccine was introduced in the 1960s, the claim was made that measles would be eradicated with one shot by 1967. Clearly, this claim was unfounded.*

*The vaccine does not confer life-long immunity, whereas recovery from natural measles infection confers life-long immunity. Even more important is that mothers who have been vaccinated for measles do not transfer long-lasting maternal antibodies to their infants, which protects their infants in the first few months of life.*

*The most important question is whether our children are healthier as a result of the measles vaccine. The fact is that this research has not been conducted by the CDC to answer definitively. We ought to measure the health of children by more parameters than simply whether or not they receive a vaccine.*

*The undisputed fact is that our children are sicker today than previous generations. More than 60% of children in America today have at least one chronic health condition. The number of asthma, allergies, autism, seizure disorders, eczema, juvenile diabetes, cancer, obesity, neurological and immunological disorders, and other serious health conditions, including Sudden Infant Death Syndrome (SIDS), is far too common in children today. The question is why? What is contributing to this significant decline in our children's health?*

*Is it the lower quality of our food and diets? Is it the significantly increased number of vaccines given*

*to our children? Is it the dramatic increase in EMFs from wireless technology? Is it the ubiquitous use of pesticides and herbicides in our food production? Is it microplastics? Contaminated water? Depleted soils? Contaminated air? In my role as Secretary of HHS, I intend to find out, and no industry, product or policy will escape evaluation of health and safety.*

*I know that it's difficult for some people when they hear me questioning vaccine safety, efficacy and necessity. But if we are going to make decisions based on the evidence rather than ideology, it is important that we have the courage and the humility to ask these important questions.*

*In my role as Secretary of HHS, I intend to ensure the vaccine industry does what it claims to do and does it safely. I will make decisions based on the evidence, not media or industry propaganda. I refuse to accept the merits of vaccination on faith. I refuse to forsake accountability out of fear of being labeled an "anti-vaxxer."*

*I know that parents who vaccinate their children sincerely believe they are protecting their child from harm. They believe vaccines will provide a type of health insurance, shielding their child from disease. I think it is important that we push beyond using "belief" as the basis for the vaccine decision and instead decide from a place of information based on quality scientific evidence. Parents need good information to make informed risk-benefit decisions. It's critical that we make important medical decisions not because we are afraid but rather because we are well-informed.*

# Shocking Discovery: Giza Pyramids Revealed as “Tip of the Iceberg” With Massive Underground Structure Extending Two Kilometres Deep

By NaturalNews.com

Advanced radar technology has revealed a massive underground structure beneath the Giza pyramids, extending two kilometres deep, challenging traditional views of ancient Egyptian engineering and history.

The structure includes chambers, pathways, cylindrical wells, and massive cubic formations, suggesting a highly sophisticated purpose beyond mere tombs or monuments.

Theories range from energy generation and planetary defence to communication hubs, with some researchers linking the design to advanced physics and lost technologies.

The discovery questions mainstream Egyptology, hinting at an advanced pre-historic civilization or extraterrestrial involvement, given the precision and scale of the engineering.

The Khafre Project aims to excavate the site, though resistance is expected, as the findings could redefine our understanding of human history and ancient civilizations.

In a revelation that could rewrite the history books, a groundbreaking discovery beneath the Giza pyramid complex has stunned archaeologists and historians worldwide. Advanced Synthetic Aperture Radar (SAR) technology has unveiled a colossal underground structure extending up to two kilometres deep, far beyond the visible pyramids. This discovery, published in a 2022 study, suggests that the iconic pyramids are merely the surface of a highly sophisticated, ancient engineering marvel. The findings challenge mainstream Egyptology and raise profound questions about the existence of an advanced pre-historic civilization—or even extraterrestrial intervention in Earth’s history.

## The Hidden Depths of Giza

The study, led by researchers from the University of Pisa and the University of Strathclyde, utilized cutting-edge SAR technology to peer beneath the surface of the Giza Plateau. The radar data revealed a labyrinthine network of chambers, pathways, and cylindrical structures descending to depths previously unimaginable. Near the base of the Khafre pyramid, five identical structures were discovered, connected by geometric pathways. Below these, eight cylindrical wells, each surrounded by descending spiral staircases, plunge to a depth of 648 meters,

where they converge into two massive cubic structures measuring approximately 80 meters per side. The entire subterranean complex extends an astonishing two kilometres beneath the surface.

“This is not just a tomb or a monument—it’s a machine,” said Filippo Biondi, one of the lead researchers. “The precision and scale of this structure suggest a purpose far beyond what we’ve traditionally attributed to the ancient Egyptians.”

## A Machine of Unknown Purpose

The discovery has ignited a firestorm of speculation about the function of this underground marvel. Mainstream Egyptology has long maintained

that the pyramid was a weapon of mass destruction, using advanced physics to focus energy as a scalar weapon. The newly discovered cylindrical wells and cubic structures could align with these theories, potentially serving as conduits for energy or sound waves.

## Challenging the Narrative of Human History

The implications of this discovery are seismic. If the Giza complex was indeed a machine of such complexity, it challenges the prevailing narrative of human history. The construction of such a structure would require knowledge and technology far beyond what is believed to have existed in ancient Egypt—or

even in modern times. This has led some researchers to speculate about the involvement of an advanced pre-historic civilization or extraterrestrial beings.

“The pressure at these depths, the precision of the engineering—it’s not something that could have been achieved with primitive tools,” said one geologist involved in the study. “This suggests the existence of a civilization that was far more advanced than we’ve ever imagined.”

The discovery also aligns with alternative theories about lost civilizations, such as Tartaria, a supposed advanced society that some believe was wiped from historical records. The idea that Earth may have been home to multiple advanced civilizations, each destroyed by cata-

clysmic events, is gaining traction among researchers.

## What Lies Ahead?

The Khafre Project, the team behind the discovery, hopes to secure approval for an excavation to explore the underground structures further. However, history shows that such endeavours are often met with resistance, particularly when they challenge established narratives.

As the world grapples with the implications of this discovery, one thing is clear: the Giza pyramids are no longer just ancient tombs. They are the gateway to a hidden world, a testament to a civilization—or civilizations—that may have been far more advanced than we ever dared to imagine. The secrets of Giza are only beginning to be uncovered, and the truth may be stranger than fiction.

Originally published at [naturalnews.com](http://naturalnews.com)

that the pyramids were tombs for pharaohs, built around 2500 BCE using rudimentary tools and techniques. However, the intricate mathematics embedded in their construction—including references to pi, the golden ratio, and even the speed of light—hint at a level of sophistication that defies conventional explanations.

Theories about the structure’s purpose range from the plausible to the extraordinary. Some researchers propose that it could have served as an energy-generating device, harnessing Earth’s natural frequencies. Nikola Tesla, the visionary inventor, once speculated that the pyramids could function as wireless energy transmitters. Others suggest the structure might have been a planetary defence system or a communication hub capable of transmitting signals across vast distances.

Christopher Dunn, author of *The Giza Power Plant*, has long argued that the Great Pyramid was a machine designed to convert mechanical stress into electricity. Joseph Farrell, in his book *The Giza Death*

# Absurdity Observer

## Some of the Most Absurd Things That Have Happened in Recent Weeks

- **Moderna has been fined for “luring children into COVID vaccine trials” with teddy bears.** Britain’s pharmaceutical watchdog found that the US-based biotech firm discredited the industry when their online advertising offered free teddy bears to bribe children into taking the experimental gene therapy injections. Moderna was fined £44,000 (81,000 CAD), a mere drop in the bucket compared to the profits they’ve gained.

- Aligning with the interests of some of its major funders (including Coca-Cola, PepsiCo, and Walmart) the **American Heart Association (AHA) testified against a Texas bill that would limit the use of food stamps for purchasing soda, candy, and chips.** The AHA argued the proposal could reduce program participation and maintained that nutrition education is a more effective solution. During the hearing, Walmart also voiced its opposition to the bill.

- A startling new study predicts that about **60% of adults and a third of children worldwide will be overweight or obese by 2050.** The article published in *The Lancet* (Ng et al.) also noted that the prevalence of obesity more than doubled worldwide between 1990 and 2021 in both men (from 5.8% to 14.8%) and women (from 10.2% to 20.8%).

- A major study published in the *Oxford Academic Journal of Sexual Medicine* (Lewis et al.) raises serious concerns about the mental health outcomes of individuals who undergo sex-change surgeries. Drawing on data from over 107,000 patients diagnosed with gender dysphoria, the **research found that those who opted for surgical intervention faced significantly higher rates of mental health issues compared to those who did not.** These findings challenge the prevailing narrative that so-called “gender-affirming” surgeries improve mental well-being.

- In a sweeping nationwide crackdown, **dozens of police teams across Germany raided the homes of social media users last month—targeting them for so-called “harmful” online speech.** Under Germany’s expansive hate speech laws, content deemed insulting, misleading, or inciting—even satire or reposted material—can be treated as a criminal offence. While the law has been on the books for nearly a decade, recent weeks have seen a dramatic escalation in enforcement, with state power now knocking down the doors of people who posted cartoons and memes.

- After pioneering the world’s first large-scale program to prescribe pharmaceutical-grade opioids to individuals with opioid use disorder in 2020, **the BC government has announced it will end the take-home portion of its “safe supply” initiative.** The decision follows extensive reporting revealing that drugs dispensed through the program were being diverted to the black market.

wrong medication upon hospital admission.

- **Around 14.6 million Canadians are currently insolvent—unable to afford bills and debts with their income, according to the MNP Consumer Debt Index,** conducted by Ipsos — one of the most cited sources for assessing Canadians’ finances. The latest report, covering Q4 2024, found that 35% of surveyed Canadians reported being broke — unable to meet their financial obligations with current income.

- The Citizen Lab at the University of Toronto released **a startling report revealing evidence that Canadian law enforcement may have used spyware to hack mobile devices.** The report uncovered a technical connection between Paragon, an Israel-based maker of military-grade spyware, known as Graphite, for government clients and entities in Ontario—including the Ontario Provincial Police (OPP).

- **Pokémon Go players were duped into training a powerful AI map of the real world.** While you thought you were training your Pikachu, you were actually training AI to see the world. In a recent blog post, the game’s developer, Niantic, announced

that it is constructing what it calls a Large Geospatial Model (LGM) from users’ cameras, capturing high-resolution, GPS-tagged images of real-world locations. Niantic was purchased by a Saudi investment fund for \$3.5 billion USD last month.

- **Amazon has announced that it has removed a key privacy safeguard:** local voice processing on select Echo devices. This means that every Alexa request must be sent to the cloud for processing.

- **The Ontario Court of Appeal has ruled in favour of advancing a \$290 million lawsuit targeting Freedom Convoy organizers and participants.** The court reviewed evidence suggesting the defendants may have acted together to disrupt Ottawa’s downtown through street blockades, horn honking, and engine idling. Named defendants include Chris Barber, Tamara Lich, and Patrick King, identified by the plaintiffs as key organizers, along with other participants, truckers, and donors accused of supporting the protest. The plaintiffs seek \$290 million in damages for private and public nuisance, including \$60 million for general damages, \$70 million for business losses, \$150 million for lost wages, and \$10 million in punitive damages.

- **A new Fraser Institute study (Green et al.) found that Canada’s goal of achieving “Net Zero by 2050” is unattainable** due to the growing demand for electricity driven by population and economic growth. The report also highlights the immense energy required to support emerging technologies and artificial intelligence systems.

- A poll by the Metropolis Institute found that **nearly twice as many Canadians believe stating their gender identity and/or pronouns during work calls reinforces stereotypes** rather than helps reduce them.

- **The parents of the six-year-old girl widely reported by mainstream media as “the first measles-related death in over a decade” are speaking out to challenge that narrative.** In a series of videos released by *Children’s Health Defense*, the parents explained that their daughter died from a form of pneumonia not typically associated with measles. They were joined by Dr. Pierre Kory, a physician who reviews medical cases for malpractice, who stated, “She did not die of measles by any stretch of the imagination.” According to Dr. Kory, the girl contracted Mycoplasma pneumonia after recovering from measles and ultimately died due to a medical error—having been given the
